2008 Q3

THIRD QUARTER SUMMARY

Maximize Cash Flow

- Production averaged 183.7 MMcfe/d, as compared to 193.1 MMcfe/d in the third quarter of 2007. PET's 2008 capital expenditure programs have added approximately 29 MMcfe/d of new production, limiting the natural production decline on the Trust's asset base to four percent year over year, excluding the disposition of approximately 2 MMcfe/d of working and royalty interest production in 2008.
- Realized natural gas prices increased 55 percent to $8.78 per Mcfe for the three months ended September 30, 2008 as compared to $5.66 per Mcfe for the comparative quarter in 2007, driven by a significant increase in NYMEX and AECO gas prices.
- Funds flow increased 85 percent to $76.4 million ($0.68 per Trust Unit) for the three months ended September 30, 2008 from $41.2 million ($0.38 per Trust Unit) for the third quarter of 2007 due to higher realized prices, partially offset by an increase in the Trust's royalty rate and higher operating costs. Funds flow netbacks for the quarter increased 94 percent to $4.52 per Mcfe/d from $2.33 per Mcfe/d in the third quarter of 2007.
- PET's record net earnings of $180.8 million for the third quarter of 2008 were due primarily to strong funds flows and an unrealized gain on financial instruments of $168.9 million, related to an increase in fair value of the Trust's natural gas hedging contracts during the period.
- PET's hedging position provides a degree of predictability to forward cash flows in a highly uncertain economic climate. PET currently has various price management contracts in place through March 2011 for an average of 30 percent of production at $8.30 per GJ at AECO.

Accretive Acquisitions

- PET closed dispositions for non-core assets representing 0.7 MMcfe/d of production for proceeds of $11.8 million.
- In November 2008, PET also sold 0.6 MMcf/d of shut-in gas over bitumen deemed production for proceeds of $5.7 million. This brings non-core dispositions to date in 2008 to $24.4 million.

Asset Optimization

- Exploration and development expenditures of $18.1 million for the third quarter were focused on the Southern district where 25 gross (20.5 net) wells were drilled with a 100 percent success rate.
- The Trust also invested in $16.9 million of undeveloped land purchases for the period, focused primarily on the acquisition of several large parcels of exploratory Crown acreage in west central Alberta. This area is outside of the Trust's core asset base and offers a number of high impact natural gas drilling opportunities to complement PET's existing prospect inventory.
- PET has budgeted for additional 2008 exploration and development capital spending and land purchases of approximately $30 million over the final quarter of 2008.
- PET is budgeting for a base capital expenditure program of $113 million for 2009 and expects to spend $60 million in the first quarter. The remaining $53 million is planned to begin after break-up and continue through the second half of the year. PET has also initiated the pre-planning work required to execute an additional $25 million of capital spending in the second half of 2009 should natural gas prices and other factors support an expanded capital program.

Healthy Balance Sheet

- The Trust continued to strengthen its balance sheet during the quarter, reducing net debt, including convertible debentures by $24.1 million to $523 million at September 30, 2008 or 1.7 times annualized third quarter funds flow.
- PET applied excess funds flows to outstanding bank debt during the quarter, resulting in net bank debt on September 30, 2008 of $286.7 million drawn on its reconfirmed borrowing capacity of $410 million, down eight percent from $310.8 million at June 30, 2008.

Maximize Unitholder Value

- Distributions payable for the third quarter of 2008 totaled $0.30 per Trust Unit, comprised of $0.10 per Trust Unit paid on August 15, September 15 and October 15, representing a payout ratio of 44.0 percent of funds flow.
- Incorporating the anticipated results from the approved capital budget program, PET expects natural gas production of 175 to 180 MMcfe/d and operating costs of $1.80 to $1.85 per Mcfe of production for the upcoming fiscal year. Based on the current forecast for natural gas prices incorporating the Trust's forward sales contracts, PET forecasts that the 2009 capital program and distributions will be funded entirely through 2009 funds flow.
- In response to a substantial decrease in the trading price of the Trust's securities, PET announced on October 17, 2008 the suspension of Trust Units available under the DRIP plan and instituted normal course issuer bids to repurchase its outstanding Trust Units and convertible debentures (the "Bids"). As of November 4, 2008 PET has not repurchased any securities under the Bids.

CANADA'S PREMIUM NATURAL GAS TRUST

Paramount Energy Trust ("PET" or the "Trust") is a fully functional oil and gas business operating in a sustainable cash flow distributing trust structure. Since inception our primary goal has been to generate premium returns while growing a focused low risk, low exposure exploration and production business. Since operations as a trust commenced in February 2003, there has been substantial value creation: Cash distributions approximating 150% of our initial net asset value have been paid to Unitholders while sustaining production and reserves per Unit and growing the land base and inventory of opportunities. PET's team is accountable, entrepreneurial and motivated by excellence. We will continue to be focused on maximizing Unitholder value through the four pillars of our business plan while managing the Trust through volatile commodity price cycles, evolving market conditions and the government's proposed changes to the trust structure in Canada in 2011.

FINANCIAL AND OPERATING HIGHLIGHTS	Three Months Ended September 30			Nine Months Ended September 30		
($Cdn thousands except volume and per Trust Unit amounts)	**2008**	2007	% Change	**2008**	2007	% Change

(1) These are Non-GAAP measures. Please refer to "Significant Accounting Policies and Non-GAAP Measures" included in management's discussion and analysis.

(2) Based on weighted average Trust Units outstanding for the period.

(3) Based on Trust Units outstanding at each distribution date.

(4) Net debt includes net working capital (deficiency) before short-term financial instrument assets and liabilities and the current portion of convertible debentures. Total net debt includes convertible debentures measured at principal amount. Please refer to "Significant Accounting Policies and Non-GAAP Measures" included in management's discussion and analysis.

(5) The deemed production volume describes all gas shut-in or denied production pursuant to a decision report, corresponding order or general bulletin of the Alberta Energy and Utilities Board ("AEUB"), or through correspondence in relation to an AEUB ID 99-1 application. This deemed production volume is not actual gas sales but represents shut-in gas that is the basis of the gas over bitumen financial solution which is received monthly from the Alberta Crown as a reduction against other royalties payable.

(6) PET's commodity hedging strategy employs both financial forward contracts and physical natural gas delivery contracts at fixed prices or price collars. In calculating the Trust's natural gas price before financial and physical hedging, PET assumes all natural gas sales based on physical delivery fixed-price or price collar contracts during the period were instead sold at AECO daily index.

(7) Production amounts are based on the Trust's interest before royalties payable.

MANAGEMENT'S DISCUSSION AND ANALYSIS

The following is management's discussion and analysis ("MD&A") of PET's operating and financial results for the three and nine months ended September 30, 2008 as well as information and estimates concerning the Trust's future outlook based on currently available information. This discussion should be read in conjunction with the Trust's consolidated financial statements and accompanying notes for the three and nine months ended September 30, 2008 and 2007 as well as the Trust's audited consolidated financial statements and accompanying notes and MD&A for the years ended December 31, 2007 and 2006. Readers are referred to the advisories regarding forecasts, assumptions and other forward-looking information contained in the "Forward Looking Information" section of this MD&A. The date of this MD&A is November 7, 2008.

Mcf equivalent (Mcfe) may be misleading, particularly if used in isolation. In accordance with National Instrument 51-101 ("NI 51-101"), an Mcfe conversion ratio for oil of 1 bbl: 6 Mcf has been used, which is based on an energy equivalency conversion method primarily applicable at the burner tip and does not necessarily represent a value equivalency at the wellhead. For natural gas, gigajoules ("GJ") are converted to Mcf at a conversion ratio of 1.0546 GJ: 1 Mcf.

SIGNIFICANT ACCOUNTING POLICIES AND NON-GAAP MEASURES

Successful efforts accounting

The Trust follows the successful efforts method of accounting for its petroleum and natural gas operations. This method differs from the full cost accounting method in that exploration expenditures, including exploratory dry hole costs, geological and geophysical costs, lease rentals on undeveloped properties as well as the cost of surrendered leases and abandoned wells are expensed rather than capitalized in the year incurred. However, to make reported funds flow (see below) in this MD&A comparable to industry practice the Trust reclassifies geological and geophysical costs as well as surrendered leases and abandonment costs from operating activities to investing activities.

Funds flow

Management uses funds flow from operations before certain exploration costs, expenditures on asset retirement obligations and changes in non-cash working capital ("funds flow"), funds flow per Trust Unit and annualized funds flow to analyze operating performance and leverage. Funds flow as presented does not have any standardized meaning prescribed by Canadian Generally Accepted Accounting Principles ("GAAP") and therefore it may not be comparable to the calculation of similar measures for other entities. Funds flow as presented is not intended to represent operating profits for the period nor should it be viewed as an alternative to cash flow provided by operating activities, net earnings or other measures of financial performance calculated in accordance with GAAP. Funds flow is reconciled to its closest GAAP measure, cash flow provided by operating activities, as follows:

Funds flow GAAP reconciliation	Three months ended September 30		Nine months ended September 30	
($ thousands except per Trust Unit amounts)	**2008**	2007	**2008**	2007
Cash flow provided by operating activities	**72,556**	51,707	**190,585**	184,655
Exploration costs [1]	**918**	2,560	**5,358**	8,972
Expenditures on asset retirement obligations	**684**	618	**3,590**	2,283
Changes in non-cash operating working capital	**2,222**	(13,673)	**14,388**	(16,432)
Funds flow	**76,380**	41,212	**213,921**	179,478
Funds flow per Trust Unit [2]	**$ 0.68**	$ 0.38	**$ 1.93**	$ 1.90

(1) Certain exploration costs are added back to funds flow in order to be more comparable to other energy trusts that use the full cost method of accounting for oil and gas activities. Exploration costs that are added back to funds flow include seismic expenditures, dry hole costs and expired leases and are considered by PET to be more closely related to investing activities than operating activities.

(2) Based on weighted average Trust Units outstanding for the period.

Additional significant accounting policies and non-GAAP measures are discussed elsewhere in this MD&A.

OPERATIONS

Production

Natural gas production by core area (MMcfe/d)	Three months ended September 30 2008	2007	Nine months ended September 30 2008	2007
Northern District				
West Side	**38.5**	43.4	**38.3**	42.8
East Side	**29.2**	28.3	**28.0**	27.0
Athabasca	**51.4**	56.4	**53.4**	58.8
Northern District total	**119.1**	128.1	**119.7**	128.6
Southern District				
Birchwavy West	**23.2**	18.7	**23.0**	8.9
Birchwavy East	**28.3**	32.0	**29.6**	13.6
East Central	**4.4**	3.6	**4.2**	2.7
Southern District total	**55.9**	54.3	**56.8**	25.2
Severo Energy Corp.	**6.9**	7.0	**7.0**	5.9
Other	**1.8**	3.7	**1.8**	3.8
Total	**183.7**	193.1	**185.3**	163.5
Deemed production from gas over bitumen financial solution	**19.0**	20.2	**19.6**	19.9
Total actual plus deemed production	**202.7**	213.3	**204.9**	183.4

Average production measured 183.7 MMcfe/d for the three months ended September 30, 2008 as compared to 193.1 MMcfe/d reported in the third quarter of 2007. PET's 2008 capital expenditure programs have added approximately 29 MMcfe/d of new production, limiting the natural production decline on the Trust's asset base to four percent year over year excluding the disposition of approximately 2 MMcfe/d of working and royalty interest production in 2008. Including the deemed production volume related to the gas over bitumen financial solution, average aggregate daily production (actual and deemed) decreased five percent to 202.7 MMcfe/d from 213.3 MMcfe/d in the third quarter of 2007 primarily as a result of minor asset dispositions, natural production declines largely offset by capital spending and the annual ten percent reduction in deemed gas over bitumen volumes prescribed by the Alberta government (see "Gas over bitumen royalty adjustments" in this MD&A).

Production for the nine months ended September 30, 2008 increased 13 percent to 185.3 MMcfe/d from 163.5 MMcfe/d in the comparative period for 2007 due to the full effect of the acquisition of natural gas properties and related assets located in east central Alberta in June 2007 ("Birchwavy Acquisition").

Capital expenditures

Capital expenditures ($ thousands)	Three months ended September 30 2008	2007	Nine months ended September 30 2008	2007
Exploration and development expenditures [1]	**$ 18,097**	$ 9,540	**$ 77,219**	$ 90,927
Crown and freehold land purchases	**16,882**	2,561	**20,543**	6,761
Acquisitions	**2,020**	(518)	**2,374**	455,269
Dispositions	**(11,753)**	(271)	**(18,745)**	(3,361)
Asset retirement expenditures	**684**	618	**3,590**	2,283
Other	**235**	275	**661**	865
Total capital expenditures	**$ 26,165**	$ 12,205	**$ 85,642**	$ 552,744

(1) Exploration and development expenditures for the three and nine months ended September 30, 2008 include $1.0 million and $5.4 million, respectively in exploration costs (three and nine months ended September 30, 2007 - $2.6 million and $9.0 million, respectively) which have been expensed directly on the Trust's statement of earnings (loss) in accordance with the successful efforts method of accounting. Exploration costs including seismic expenditures, dry hole costs and expired leases are considered by PET to be more closely related to investing activities than operating activities, and therefore they are included with capital expenditures in this table.

Exploration and development expenditures totaled $18.1 million for the three months ended September 30, 2008, and similar to the second quarter were concentrated on drilling, completion and facilities construction activities primarily in the Southern district. PET drilled 25 wells (20.5 net) with a 100 percent net success rate in the quarter. Exploration and development expenditures of $77.2 million for the nine months ended September 30, 2008 included a $46 million winter capital program consisting of drilling, completion and tie-in activities distributed throughout the Trust's three core areas in the Northern district.

Crown and freehold land purchases totaled $16.9 million in the third quarter of 2008, as compared to $2.6 million for the three months ended September 30, 2007. Land expenditures in the current period were focused on the acquisition of several large parcels of exploratory acreage in west central Alberta.

This area is outside of the Trust's current core asset base and offers a number of high impact natural gas drilling opportunities to counterbalance the low exposure, predictable production profiles characteristic of PET's existing assets.

In the third quarter of 2008 PET closed the disposition of certain royalty and non-core working interests representing 0.7 MMcfe/d of production for proceeds of $11.8 million. Subsequent to the end of the third quarter the Trust disposed of approximately 0.6 MMcf/d of shut-in gas over bitumen deemed production for proceeds of $5.7 million. Non-core dispositions total $24.4 million to date in 2008.

MARKETING

Natural gas prices

	Three months ended September 30		Nine months ended September 30	
Natural gas prices ($/Mcfe, except percent amounts)	**2008**	2007	**2008**	2007
Reference prices				
AECO Monthly Index	**9.25**	5.61	**8.58**	6.81
AECO Daily Index	**7.74**	5.14	**8.64**	6.54
Alberta Gas Reference Price (1)	**8.21**	5.16	**8.28**	6.36
Average PET prices				
Before financial hedging and physical forward sales (2)	**8.93**	5.44	**8.64**	6.55
Percent of AECO Monthly Index (%)	**97**	97	**101**	96
Before financial hedging (3)	**8.83**	5.54	**8.59**	6.78
Percent of AECO Monthly Index (%)	**96**	99	**100**	100
After financial hedging and physical forward sales	**8.78**	5.66	**8.39**	7.59
Percent of AECO Monthly Index (%)	**95**	101	**98**	111

(1) Alberta Gas Reference Price is the price used to calculate Alberta Crown royalties. Alberta Gas Reference Price for September 2008 is an estimate.

(2) PET's commodity hedging strategy employs both financial forward contracts and physical natural gas delivery contracts at fixed prices or price collars. In calculating the Trust's natural gas price before financial hedging and physical forward sales, PET assumes all natural gas sales based on physical delivery fixed-price or price collar contracts during the period were instead sold at AECO Monthly Index.

(3) Natural gas price before financial hedging includes physical forward sales contracts for which delivery was made during the reporting period but excludes realized gains and losses on financial instruments.

Realized natural gas prices increased 55 percent for the three months ended September 30, 2008 to $8.78 per Mcfe from $5.66 per Mcfe in 2007 as compared to a 51 percent increase in AECO Daily Index prices and a 65 percent increase in AECO Monthly Index prices from quarter to quarter. The significant increase in hub pricing was fueled by lower year over year gas storage inventories from winter heating demand and a dramatic rise in the price of crude oil at the start of the third quarter, leading to an AECO Monthly Index price of $11.39 per Mcf for July 2008. During the third quarter natural gas prices weakened steadily as a result of increasing storage levels and declines in gas demand brought on by softening economic conditions in North America. The Trust's realized gas price for the three months ended September 30, 2008 was 95 percent of the AECO Monthly Index price primarily as a result of realized losses of $0.9 million on financial forward natural gas contracts, as compared to gains of $2.1 million in the comparative period in 2007. Included in the $0.9 million of realized losses is $11.2 million in financial instrument gains related to early termination of fixed-price forward financial contracts, which increased the Trust's realized gas price by eight percent in the current period.

Realized natural gas prices for the nine months ended September 30, 2008 measured $8.39 per Mcfe or 98 percent of the AECO Monthly Index as compared to $7.59 per Mcfe or 111 percent of the AECO Monthly Index in the first nine months of 2007. The lower percentage in 2008 was the result of realized losses of $9.9 million on financial forward sales contracts for contracts which settled against the AECO Monthly Index in April through August, as compared to realized gains of $36.0 million in 2007.

Risk management

PET's risk management strategy is to proactively manage forward price exposure to protect the level of monthly distributions and manage the balance sheet, enhance or protect the economics of acquisitions and capital programs, and capitalize on perceived market anomalies. The Trust maintains a balanced gas price risk management portfolio using both financial hedge arrangements and physical forward sales to hedge up to a maximum of 50 percent of forecast production including gas over bitumen deemed volumes. PET will also enter into foreign exchange swaps and physical or financial swaps related to the differential between natural gas prices at the AECO and NYMEX trading hubs (basis transactions) in order to mitigate the effects of fluctuations in foreign exchange rates and basis differentials on the Trust's realized gas price. The term "financial instruments" includes all financial and physical risk management contracts. Although PET considers these risk management contracts to be effective economic hedges against potential gas price volatility, the Trust does not follow hedge accounting for its financial instruments.

PET's hedging activities are conducted by an internal Risk Management Committee under guidelines approved by Paramount Energy Operating Corp.'s (the "Administrator") Board of Directors. PET's hedging strategy, though designed to protect cash flow and distributions, is opportunistic not routine in nature. The Trust may elect to reduce or increase its hedging contracts depending on perceived position in the commodity price cycle, balance sheet strength, future capital spending plans, and forecasted funds flows and distribution levels. The Trust mitigates credit risk by entering into risk management contracts with a diversified group of financially sound, credit-worthy counterparties.

PET's hedging strategy has been focused on locking in periodic strength in AECO and NYMEX forward prices over the past two years to ensure a base level of production revenue, despite weakness in spot prices related to such factors as high gas storage levels, increases in liquefied natural gas ("LNG")

imports into North America and variable cooling, heating and industrial demand. PET estimates that additional realized natural gas revenues and funds flows of $51.0 million in 2006 and $62.5 million in 2007 can be attributed to the Trust's risk management program.

Natural gas prices declined significantly during the three months ended September 30, 2008, as the positive momentum generated in the first half of the year by reduced storage levels and lower LNG imports was eroded by mild summer cooling demand, increases in North American natural gas supply primarily from shale gas projects in the United States, declining oil prices and a general deterioration of world economic conditions. As a result of the decrease in market prices a net mark-to-market financial instrument asset of $39.3 million was recorded at September 30, 2008, and unrealized gains on financial instruments of $168.9 million and $19.2 million respectively were recorded for the three and nine months then ended. The Trust's hedging program has provided a degree of stability and predictability to forward cash flows in what is clearly an uncertain economic climate.

A complete list of PET's outstanding financial instruments as at September 30, 2008 is disclosed in note 12 to the interim unaudited consolidated financial statements as at and for the three and nine months ended September 30, 2008.

PET continued to supplement its risk management program after the end of the third quarter. Financial and physical natural gas forward sales positions (net of related financial and physical fixed-price natural gas purchase contracts) at November 7, 2008 are as follows:

Financial and physical forward net sales positions as at November 7, 2008

Type of Contract	Volumes at AECO (GJ/d)	% of 2008 Estimated Production (3)	Price ($/GJ) (1)	Current Forward Price ($/GJ) (2)	Term

Period Total	**10,000**	**5**	**9.03**	**9.09**	**November 2010 – March 2011**

(1) Weighted average prices are calculated by netting the volumes of the lowest-priced financial and physical sold/bought contracts together and measuring the net volume at the weighted average "sold" price for the remaining financial and physical contracts. Included in the November 2008 and December 2008 – March 2009 volume summaries is a collar to sell forward 5,000 GJ/d at a floor price of $7.00 per GJ at AECO and a ceiling price of $8.00 per GJ. As the current AECO forward price is within the floor/ceiling of the collar, the AECO forward price is used in the weighted average price calculation.

(2) Average AECO forward price for November through December 2008 as at November 3, 2008 is $6.85 per GJ.

(3) Calculated using 205 MMcf/d and includes actual and gas over bitumen deemed projected production volumes.

The Trust will also enter into arrangements to fix the basis differential between the NYMEX and AECO trading hubs. The price at which these contracts settle is equal to the NYMEX index less a fixed basis amount. A complete list of PET's basis transactions as at September 30, 2008 is disclosed in note 12 to the interim unaudited consolidated financial statements. Open basis positions (sales contracts net of offsetting purchase contracts) as at November 7, 2008 are as follows:

Open basis positions at November 7, 2008

Type of Contract	Volumes at NYMEX (MMbtu/d)	Price (US$/MMbtu)	Term

FINANCIAL RESULTS

Revenue

	Three months ended September 30		Nine months ended September 30	
Revenue ($ thousands)	**2008**	2007	**2008**	2007
Oil and natural gas revenue, before financial hedging [1]	**149,216**	98,508	**434,486**	302,652
Realized gains (losses) on financial instruments [2]	**(888)**	2,109	**(9,948)**	36,010
Total oil and natural gas revenue	**148,328**	100,617	**424,538**	338,662

(1) Includes revenues related to physical forward sales contracts which settled during the period.

(2) Realized gains (losses) on financial instruments include settled financial forward contracts and options.

Oil and natural gas revenue increased to $148.3 million for the three months ended September 30, 2008 compared to $100.6 million for the third quarter of 2007 due to a 55 percent increase in realized natural gas prices from period to period. Oil and natural gas revenue increased 25 percent to $424.5 million for the nine months ended September 30, 2008 from $338.7 million for the first nine months of 2007 primarily related to a 13 percent increase in production levels due to the full effect of production from the Birchwavy assets in 2008, as well as an 11 percent increase in natural gas prices.

(1) Revenue includes realized gains and losses on financial instruments.

(2) Excludes non-cash items.

(3) This is a non-GAAP measure; see "Significant accounting policies and non-GAAP measures" in this MD&A.

Royalties

For the three and nine months ended September 30, 2008, PET's average royalty rate (royalties as a percentage of revenues including gains and losses on financial instruments) climbed to 18.2 percent and 17.5 percent, respectively from 16.4 percent and 14.6 percent, respectively for the three and nine months ended September 30, 2007. Alberta Crown royalties are based on the Alberta Gas Reference Price. The higher royalty rates in 2008 are due to PET's realized natural gas price being closer to the average Alberta Gas Reference Price (101 percent of the Alberta Gas Reference Price in the first nine months of 2008 as opposed to 119 percent of the Alberta Gas Reference Price in 2007). Royalty expense increased from $16.5 million for the three months ended September 30, 2007 to $27.1 million for the current quarter as a result of a 59 percent increase in the Alberta Gas Reference Price.

New Alberta Royalty Regime

On October 25, 2007, the Government of Alberta announced a "New Royalty Framework" for oil and natural gas royalties in the Province of Alberta. New royalty rates will apply to all production effective January 1, 2009. While detailed Regulations have yet to be released, PET's initial assessment is that, based on the Trust's profile of well productivity for the first nine months of 2008 and at various natural gas prices, the effect of the new royalty framework on PET's royalty rate including estimated deductions for capital cost allowance and custom processing would be approximately as shown below. Crown royalty rates would rise relative to their current levels at higher gas prices and decrease relative to their current levels at lower gas prices. The rates presented are for Crown royalties only and do not include freehold and overriding royalties paid to landowners.

Estimated change in royalty rate	AECO Gas Price ($/GJ) $6.00	$7.00	$8.00	$10.00
Crown royalty rate under current royalties	12.6%	13.2%	13.7%	14.3%
Estimated Crown royalty rate under new royalty framework	6.7%	10.6%	13.4%	19.1%
Increase (decrease) in royalty rate (percentage points)	(5.9)	(2.6)	(0.3)	4.8
Percentage increase (decrease) in royalty rate (%)	(46.8%)	(19.7%)	(2.2%)	33.6%

PET estimates that its total royalty rate for the nine months ended September 30, 2008 including Crown, freehold and overriding royalties as a percentage of oil and natural gas revenues (including realized gains and losses on financial instruments) would have been 17.1 percent under the New Royalty Framework, as opposed to the 17.5 percent actually incurred for the current period under the current royalty structure. The Alberta Crown royalty rate for the current quarter would have been approximately 13.5 percent under the New Royalty Framework compared to 13.9 percent under the current structure.

Operating costs

Production costs increased 25 percent to $32.8 million ($1.94 per Mcfe) in the third quarter of 2008 as compared to $26.3 million ($1.48 per Mcfe) in the third quarter of 2007. The higher operating costs in 2008 were primarily due to higher natural gas processing fees, increased property taxes and a $1.0 million charge for annual administration fees for the Energy Resources Conservation Board ("ERCB"). The 2007 ERCB administration fees were recorded in the second quarter of 2007 and therefore excluded from operating costs for the comparative period. Operating costs for the first nine months of 2008 increased to $94.3 million ($1.87 per Mcfe) from $73.4 million ($1.64 per Mcfe) in 2007 as a result of higher production levels and $5.3 million in natural gas processing adjustments related to prior years that were recorded in 2008.

Transportation costs

Transportation costs decreased $0.1 million to $3.5 million for the current quarter as compared to the third quarter of 2007 as a result of slightly lower production volumes in the current period. Transportation costs on a unit-of-production basis were $0.21 per Mcfe for the three and nine month periods ended September 30, 2008 as compared to $0.20 per Mcfe and $0.21 for the three and nine months ended September 30, 2007.

Operating netback

The 55 percent increase in the Trust's realized natural gas price was the primary driver in increasing the operating netback to $84.9 million ($5.02 per Mcfe) for the three months ended September 30, 2008 from $54.2 million ($3.05 per Mcfe) for the three months ended September 30, 2007, partially offset by an increase in PET's royalty rate and higher operating costs.

Operating netback reconciliation	($ millions)	($/Mcfe)
Price increase, including realized gains on financial instruments	52.6	3.12
Production decrease	(4.9)	(0.29)
Royalty increase	(10.6)	(0.63)
Operating cost increase	(6.5)	(0.38)
Transportation cost decrease	0.1	0.00
Increase in net operating income	30.7	1.82

Lease rentals

Lease rentals reflect periodic payments made to the Alberta Crown or other land owners in order to maintain the rights to explore previously-acquired undeveloped acreage. These payments are expensed by the Trust in accordance with the successful efforts method of accounting for oil and gas assets, whereas they are typically capitalized by companies employing the full cost method of accounting. Lease rentals totaled $1.0 million for the three months ended September 30, 2008 as compared to $1.2 million for the third quarter of 2007. Lease rental payments of $0.2 million received during 2008 for the lease of a portion of PET's fee-simple lands were recorded as a reduction to exploration expenses.

General and administrative costs

	Three months ended September 30		Nine months ended September 30	
General and administrative ($ thousands)	**2008**	2007	**2008**	2007
Cash general and administrative costs	**6,429**	5,755	**22,734**	15,123
Trust-unit based compensation (non-cash)	**1,167**	602	**4,195**	3,009
Total general and administrative expenses	**7,596**	6,357	**26,929**	18,132

General and administrative expenses increased $1.2 million ($0.09 per Mcfe) to $7.6 million for the three months ended September 30, 2008 compared to $6.4 million for the three months ended September 30, 2007. PET moved its head office to leased space in December 2007 following the sale of its previous premises and as a result the Trust now incurs office lease expense, which totaled $0.7 million for the current quarter. The remainder of the increase was related to non-cash stock-based compensation expense, which increased to $1.2 million for the third quarter of 2008 from $0.6 million for the third quarter of 2007, in line with the increase in number of unit incentive rights outstanding. General and administrative expenses for the nine months ended September 30, 2008 totaled $26.9 million, an increase of $8.8 million over the comparative period for 2007. The increase is a result

of higher staff levels and costs related to the Birchwavy Acquisition and the resulting expansion of PET's production base and number of core areas, including an ongoing focus on new venture opportunities in the Trust's portfolio.

Interest and other

Interest and other expense totaled $3.9 million for the three months ended September 30, 2008 as compared to $6.5 million for the comparable period in 2007. Interest and other expense in the third quarter of 2007 was affected by a $0.6 million loss related to the decrease in market value of the Trust's investment in Cordero Energy Inc. ("Cordero"), a publicly traded oil and gas exploration company, as well as higher interest rates on bank debt in 2007 as compared to 2008 and financing fees related to the Birchwavy Acquisition. In September of 2008, Cordero was acquired by Ember Resources Inc. ("Ember") for a combination of cash and Ember common shares. As a result, PET has realized cash proceeds of $0.8 million for its investment in Cordero and currently holds 201,647 common shares of Ember, which are recorded as marketable securities on the Trust's balance sheet.

Interest on convertible debentures for the three months ended September 30, 2008 remained unchanged at $4.6 million compared to the three months ended September 30, 2007. Included in convertible debenture interest expense for both periods is $0.8 million of non-cash expenses related primarily to the amortization of debt issue costs.

Gas over bitumen royalty adjustments

In 2004 and 2005 the Government of Alberta enacted amendments to the royalty regulation with respect to natural gas ("Royalty Regulation"), which provide a mechanism whereby the Government may prescribe additional royalty components to effect a reduction in the royalty calculated through the Crown royalty system for operators of gas wells which have been denied the right to produce by the AEUB as a result of certain bitumen conservation decisions. The formula for calculation of the royalty reduction provided in the Royalty Regulation is:

0.5 x ((deemed production volume x 0.80) x (Alberta Gas Reference Price - $0.3791/GJ))

The Trust's net deemed production volume for purposes of the royalty adjustment was 19.0 MMcf/d in the third quarter of 2008. Deemed production represents all PET natural gas production shut-in or denied production pursuant to a decision report, corresponding order or general bulletin of the AEUB, or through correspondence in relation to an AEUB ID 99-1 application. In accordance with IL 2004-36, the deemed production volume related to wells shut-in is reduced by ten percent per year on the anniversary date of the shut-in order. Deemed production decreased 1.2 MMcf/d from 20.2 MMcf/d for the three months ended September 30, 2007 as a result of the annual ten percent reduction in deemed production volumes discussed previously, partially offset by the acquisition of approximately 2.0 MMcf/d of deemed production in June 2007.

The majority of royalty adjustments received have been recorded on PET's balance sheet rather than reported as income as the Trust cannot determine if, when or to what extent the royalty adjustments may be repayable through incremental royalties if and when gas production recommences. Royalty adjustments may be repayable to the Crown in the form of an overriding royalty on gas production from wells which resume production within the gas over bitumen area. However, all royalty adjustments are recorded as a component of funds flow.

In the second quarter of 2006, PET disposed of certain shut-in gas wells in the gas over bitumen area. As part of the disposition agreement, the Trust continues to receive the gas over bitumen royalty adjustments related to the sold wells, although the ownership of the natural gas reserves is transferred to the buyer. As such, any overriding royalty payable to the Crown when gas production recommences from the affected wells is no longer PET's responsibility. As a result of this disposition, the gas over bitumen royalty adjustments received by the Trust for the affected wells are now considered revenue since they will not be repaid to the Crown.

For the three months ended September 30, 2008 the Trust received $6.0 million in gas over bitumen royalty adjustments, of which $1.0 million was classified as revenue and $5.0 million was recorded on the Trust's balance sheet, as compared to $3.7 million received in the third quarter of 2007. The increase in the current quarter was due to the higher Alberta Gas Reference Price as compared to 2007. Cumulative royalty adjustments received to September 30, 2008 total $94.0 million.

Funds flow

As a result of the variables discussed above, funds flow netbacks increased 94 percent from $2.33 per Mcfe in the third quarter of 2007 to $4.52 per Mcfe in the third quarter of 2008. Higher revenue and gas over bitumen royalty adjustments per Mcfe accounted for the increase, partially offset by higher royalties and operating costs. Funds flow increased by 85 percent to $76.4 million ($0.68 per Trust Unit) for the three months ended September 30, 2008 from $41.2 million ($0.38 per Trust Unit) in the 2007 period. Funds flow for the nine months ended September 30, 2008 totaled $213.9 million ($1.93 per Trust Unit) as compared to $179.5 million ($1.90 per Trust unit) for the comparative period in 2007, as result of a five percent increase in operating netbacks and higher production levels. The effect on funds flow per Trust Unit was mitigated by the increased number of Trust Units outstanding as a result of financing activities for the Birchwavy Acquisition and the issuance of trust units through PET's Distribution Reinvestment and Optional Unit Purchase Plan ("DRIP").

Effective March 2008, the Trust suspended the availability of Trust Units under the optional cash purchase component of the DRIP. On October 17, 2008, PET announced that there would be no Trust Units available under the distribution reinvestment component of the DRIP for the Trust's October distribution payable on November 17, 2008 and until further notice. As a result of this suspension, Unitholders that had elected to participate in the DRIP in the past and were currently enrolled will now receive cash distributions on the distribution payment dates. Should the Trust elect to reinstate the DRIP, Unitholders that were enrolled at suspension and remain enrolled at reinstatement will automatically resume participation in the DRIP. PET's distribution policy remains unchanged.

Depletion, depreciation, accretion and exploration expense

In accordance with successful efforts accounting, PET expenses exploration costs including seismic expenditures, dryhole costs, expired leases and periodic lease rentals paid on undeveloped properties. Exploration expenses decreased to $2.0 million and $7.7 million, respectively for the three and nine months ended September 30, 2008 from $3.8 million and $11.7 million, respectively for the third quarter and first nine months of 2007 primarily due to lower seismic expenditures during the 2008 period.

Depletion, depreciation and accretion ("DD&A") expense decreased from $61.9 million ($3.49 per Mcfe) in the third quarter of 2007 to $56.0 million ($3.32 per Mcfe) for the three months ended September 30, 2008 due to the lower cost of proved reserve additions provided by the Birchwavy Acquisition.

Earnings (Loss)

The Trust reported net earnings of $180.8 million ($1.62 per basic Trust Unit and $1.60 per diluted Trust Unit) for the three months ended September 30, 2008 as compared to net earnings of $5.2 million ($0.05 per basic and diluted Trust Unit) for the 2007 period. The net earnings in 2008 are due to a $168.9 million unrealized gain on financial instruments resulting from the significant decrease in AECO natural gas prices during the period, a lower DD&A rate and higher funds flow netbacks driven by increased natural gas prices. The Trust reported net earnings of $39.8 million ($0.36 per basic Trust Unit and $0.35 per diluted Trust Unit) for the nine months ended September 30, 2008 as compared to a net loss of $24.8 million ($0.26 per basic and diluted Trust Unit) in 2007. The increased earnings are primarily a result of higher funds flows and an unrealized gain on financial instruments of $19.2 million in the first nine months of 2008 versus an unrealized loss on financial instruments of $18.0 million in the 2007 period.

Asset retirement obligation

The Trust's asset retirement obligation is estimated by a third party consulting firm based on PET's net ownership interest in all wells and facilities and estimated costs to abandon wells, decommission facilities and reclaim leases and roads, discounted at a credit-adjusted interest rate to arrive at a net present value figure. The timing of asset retirement expenditures is estimated based on the reserve life of assets according to the Trust's external reserve report prepared as of December 31, 2007. These expenditures are currently expected to occur over the next 25 years with the majority of costs incurred between 2015 and 2020. PET's asset retirement obligation increased from $194.1 million at December 31, 2007 to $199.1 million at September 30, 2008 as accretion expense and additional obligations from 2008 drilling activity were partially offset by obligations disposed of in conjunction with non-core property dispositions and asset retirement expenditures of $3.6 million for the first nine months of 2008.

Income taxes and proposed changes to trust tax legislation

On June 22, 2007, new legislation was passed (the "Trust Tax Legislation") pursuant to which certain distributions will be subject to a trust-level tax and will be characterized as dividends to the Unitholders, commencing January 1, 2011.

Once the Trust Tax Legislation becomes applicable to PET, distributions to PET's Unitholders will no longer be deductible in computing the Trust's taxable income. In conjunction with the trust level tax, the personal tax on distributions will be similar to the tax paid on a dividend received from a taxable Canadian corporation. This will effectively reduce the income available for distribution to PET's Unitholders, with the end result being a two-tiered tax structure similar to that of corporations and the double taxation of distributions for Unitholders who hold their Trust Units in registered accounts such as RRSP, RRIF and RESP accounts.

The new trust tax applies to PET effective January 1, 2011 assuming the Trust continues to comply with the normal growth provisions as outlined by the federal government. Specifically, normal growth includes equity growth within certain safe harbour limits measured by reference to a Specified Investment Flow Through's ("SIFT") market capitalization as of the end of trading on October 31, 2006. The safe harbour calculation is calculated as a percentage of the market value of the SIFT's issued and outstanding publicly-traded trust units and not including any convertible debt, options or other interests convertible into or exchangeable for trust units. Those safe harbour limits are 40 percent for the period from November 1, 2006 to December 31, 2007, and 20 percent each for calendar 2008, 2009 and 2010.

These limits are cumulative, so that any unused limit for a period carries over into the subsequent period. Additional details of the guidelines include the following:

(i) new equity for these purposes includes units and debt that is convertible into units, and may include other substitutes for equity;

(ii) replacing debt that was outstanding as of October 31, 2006 with new equity, whether by a conversion into trust units of convertible debentures or otherwise, will not be considered growth for these purposes and will therefore not affect the safe harbour; and

(iii) the exchange, for trust units, of exchangeable partnership units or exchangeable shares that were outstanding on October 31, 2006 will not be considered growth for these purposes and will therefore not affect the safe harbour where the issuance of the trust units is made in satisfaction of the exercise of the exchange right by a person other than the SIFT.

PET's market capitalization as of the close of trading on October 31, 2006, having regard only to its issued and outstanding publicly-traded Trust Units, was approximately $1.4 billion, which means the Trust's safe harbour equity growth amount for the period ending December 31, 2007 was approximately $560 million, and for each of calendar 2008, 2009 and 2010 is an additional approximately $280 million, not including equity issued to replace the Trust's debt that was outstanding on October 31, 2006, including convertible debentures. Failure to comply with the "normal growth" provisions as outlined would result in the Trust being subject to the new tax immediately, as opposed to January 1, 2011. Since October 31, 2006 PET has issued approximately $385.0 million of new Trust Units and convertible debentures through the public offering completed on June 20, 2007, the Trust's DRIP plan and Unit Incentive Plan.

In June 2008 the federal government proposed amendments to the trust tax regulation ("Provincial SIFT Tax Amendments") so that, instead of basing the provincial component of the tax on a flat tax rate of 13 percent, the provincial component would be instead based on the general provincial corporate income tax rate in each province in which PET has a permanent establishment. On July 14, 2008 the Department of Finance released draft legislation which prescribed the provincial allocation formula to be applied with respect to the Provincial SIFT tax. Specifically, PET's taxable distributions will be allocated to provinces by taking half of the aggregate of:

- that proportion of the Trust's taxable distributions for the year that the Trust's wages and salaries in the province are of its total wages and salaries in Canada; and
- that proportion of the Trust's taxable distributions for the year that the Trust's gross revenues in the province are of its total gross revenues in Canada.

Under the Provincial SIFT Tax Amendments PET is considered to have a permanent establishment in Alberta, where the provincial tax rate in 2011 is expected to be ten percent, which would result in an effective tax rate of 26.5 percent in 2011 and 25 percent in 2012. These regulations are not yet considered substantively enacted for accounting purposes at September 30, 2008 therefore the provincial component of the Trust Tax Legislation is 13 percent for financial statement purposes.

PET has not recorded a future income tax liability as a result of the Trust Tax Legislation being enacted. Based on production forecasts for PET's proved reserves included in the independent reserve report as at December 31, 2007, the tax values of the Trust's assets are projected to exceed the related book values by January 1, 2011, the date the direct tax on distributions within the Trust becomes effective. PET has estimated tax pools of $675 million at September 30, 2008.

The draft legislation released by the Department of Finance also provided guidelines to enable the conversion of existing income trusts and other SIFT entities into public corporations without immediate tax consequences to the SIFTs or their investors. The amendments will allow such conversions from that date until 2013. The proposals generally facilitate the conversion of SIFTs into corporations and reflect the government's intention to permit SIFTs to convert to corporate status on a tax-deferred basis while mitigating undue tax effects.

Among other things, the proposed amendments provide for:

- the tax-deferred exchange of SIFT trust units by a Unitholder to a taxable Canadian corporation for shares of the corporation without any administrative requirement to file election forms (Unit-for-Share Exchange);
- the tax-deferred distribution of properties of a SIFT trust to a taxable Canadian corporation (Wind-up Distribution);
- the flow-through of unused tax attributes of a SIFT trust to a taxable Canadian corporation as a consequence of a Wind-up Distribution; and
- the tax-deferred distribution of shares of a taxable Canadian corporation from a SIFT trust to the public (Share Distribution).

A variety of tax and other factors need to be weighed in determining if and when PET should adjust its business and legal structure. Now that detailed rules are available on the mechanics for conversion, the Trust is in a better position to evaluate its options and determine the optimal course of action for PET's assets and business strategy going forward. PET is currently analyzing potential structures and courses of action however the Trust has not yet made a determination with respect to future changes in the structure of its business operations, if any.

SUMMARY OF QUARTERLY RESULTS

				Three months ended
($ thousands except where noted)	**Sept 30, 2008**	June 30, 2008	Mar 31, 2008	Dec 31, 2007
Oil and natural gas revenues before royalties [1]	**149,216**	166,199	121,878	109,919

(1) Excludes realized gains (losses) on financial instruments.

(2) These are non-GAAP measures; see "Significant accounting policies and non-GAAP measures" in this MD&A.

Natural gas revenues were highest in the first three quarters of 2008 primarily due to higher production levels as a result of the Birchwavy Acquisition and increased AECO natural gas prices as compared to previous quarters. Funds flows are dependent on cash netbacks for gas production; as such they were highest in the second and third quarters of 2008 and the first and second quarters of 2007 when the realized gas price was highest and lowest in the third quarter of 2007 when the Trust's realized gas price dropped to $5.66 per Mcfe.

Net earnings were highest in the third quarter of 2008 as a result of a $168.9 million unrealized gain on financial instruments. The net loss in the fourth quarter of 2006 was due to impairment charges at east central Alberta and Saskatchewan and higher DD&A expenses as compared to previous quarters. The net losses in the first quarter of 2007 and the first and second quarters of 2008 were due to unrealized losses of $48.5 million, $79.2 million and $70.4 million respectively on the change in mark-to-market value of PET's financial instruments during those periods.

LIQUIDITY AND CAPITAL RESOURCES

Net debt ($ thousands except per Trust Unit and percent amounts)	**September 30, 2008**	Three months ended December 31, 2007
Bank debt	**294,074**	342,190
Convertible debentures, measured at principal amount	**236,034**	236,109
Working capital deficiency (surplus) (1)	**(7,366)**	(6,519)
Net debt	**522,742**	571,780
Trust Units outstanding (thousands)	**112,396**	109,557
Market price at end of period ($/Trust Unit)	**7.45**	6.30
Market value of Trust Units	**837,350**	690,209
Total capitalization (1)	**1,360,092**	1,261,909
Net debt as a percentage of total capitalization (%)	**38.4**	45.3
Annualized funds flow (1)	**305,520**	238,488
Net debt to annualized funds flow ratio (times) (1)	**1.7**	2.4

(1) These are non-GAAP measures; see "Significant accounting policies and non-GAAP measures" in this MD&A. Annualized funds flow in the prior year column is for the fourth quarter of 2007.

PET has a revolving credit facility with a syndicate of Canadian chartered banks. The revolving feature of the facility expires on May 25, 2009 if not extended. Upon expiry of the revolving feature of the facility, should it not be extended, amounts outstanding as of the expiry date will have a term to maturity date of one additional year. The borrowing base on the facility is currently $400 million. Collateral for the credit facility is provided by a floating-charge debenture covering all existing and acquired property of the Trust excluding the assets of Severo Energy Corp ("Severo"), a 93 percent-owned subsidiary of the Trust, as well as unconditional full liability guarantees from all subsidiaries in respect of amounts borrowed under the facility. In addition Severo has a $10 million credit facility with a Canadian chartered bank. Bank debt decreased to $294.1 million at September 30, 2008, as compared to $342.2 million at December 31, 2007 as a result of funds flows in excess of distributions and capital expenditures during the period, $18.7 million in minor non-core property dispositions and proceeds of $20.7 million received through the Trust's distribution reinvestment program. In addition to amounts outstanding under the credit facility PET has outstanding letters of credit in the amount of $4.4 million.

At September 30, 2008 PET had convertible debentures outstanding as follows:

Convertible debentures	**6.50%**	**2006 – 6.25%**	**2005 – 6.25%**	**8%**
Principal outstanding ($ millions)	74.9	100.0	55.3	5.9
Maturity date	June 30, 2012	April 30, 2011	June 30, 2010	September 30, 2009
Conversion price ($ per Trust Unit)	14.20	23.80	19.35	14.20
Fair market value ($ millions)	67.4	95.0	53.3	5.9

Fair values of debentures are calculated by multiplying the number of debentures outstanding at September 30, 2008 by the quoted market price per debenture at that date. During the nine month period ended September 30, 2008, $0.1 million of 6.5% Convertible Debentures were converted, resulting in the issuance of 5,281 Trust Units. The 8% convertible debentures are classified as a current liability on the Trust's balance sheet.

Net debt to annualized funds flow decreased to 1.7 times for the quarter ended September 30, 2008 from 2.4 times for the three months ended December 31, 2007 as a result of strong funds flows and the repayment of $48.1 million in bank debt during 2008. Net debt to annualized funds flow in future quarters will primarily be dependent on the timing of capital expenditures and natural gas prices, which have experienced significant volatility in 2008.

A reconciliation of the decrease in net debt from December 31, 2007 to September 30, 2008 is as follows:

Reconciliation of net debt ($ millions)	
Net debt, December 31, 2007	571.8
Exploration and development and other capital expenditures and undeveloped land purchases	98.4
Dispositions, net of acquisitions	(16.4)
Funds flow	(213.9)
Distributions	100.0
Proceeds from DRIP plan	(20.7)
Expenditures on asset retirement obligations	3.5
Net debt, September 30, 2008	522.7

PET's DRIP plan provides Unitholders with the opportunity to reinvest monthly cash distributions to acquire additional Trust Units at 94 percent of the Treasury Purchase Price, which is defined as the daily volume weighted average trading price of the Trust Units for the ten trading days immediately proceeding a distribution payment date ("Treasury Purchase Price"). No additional commissions, service or brokerage fees are charged to the Unitholder

for these transactions. Through the DRIP Plan $20.7 million was invested by Unitholders during the nine months ended September 30, 2008 and a total of 2.7 million Trust Units were issued at an average price of $7.52 per Trust Unit.

Normal course issuer bid

In October 2008, in response to a substantial decrease in the Trust's unit trading price caused by weakening economic conditions in North America and a decline in world equity markets in general, PET suspended the availability of Trust Units under the DRIP plan until further notice and instituted Normal Course Issuer Bids ("Bids"). The Bids will allow PET to purchase from time to time, as it considers advisable, (i) up to 8,595,956 of its trust units (Trading Symbol: PMT.UN); (ii) up to $586,000 principal amount of its 8% convertible debentures (Trading Symbol: PMT.DB); (iii) up to $5,527,000 principal amount of its 2005 6.25% convertible debentures (Trading Symbol: PMT.DB.A); (iv) up to $9,982,000 principal amount of its 2006 6.25% convertible debentures (Trading Symbol: PMT.DB.B); and (v) up to $7,483,000 principal amount of its 6.5% convertible debentures (Trading Symbol: PMT.DB.C) on the open market through the facilities of the Toronto Stock Exchange. The Bids commenced on October 22, 2008 and will terminate on October 21, 2009, or such earlier time as the Bids are completed or terminated by PET. Copies of the "Notice of Intention to Make a Normal Course Issuer Bid" of PET pursuant to which the Bids are made may be obtained by unitholders, without charge, by contacting PET at Suite 3200, 605 – 5th Avenue S.W., Calgary, Alberta T2P 3H5 (Telephone: (403) 269-4400, Facsimile: (403) 269-4444) or at www.paramountenergy.com.

Global financial environment

The current global financial crisis has reduced liquidity in financial markets, restricted access to financing and caused significant volatility in the trading prices of publicly-traded securities and commodities. These will impact the performance of the economy going forward. At current natural gas prices, PET is able to fund monthly distributions and capital expenditure programs through funds flow from operations. The Trust's credit facility is with a syndicate of six Canadian chartered banks and is currently in the amount of $400 million, with a semi-annual review scheduled for April 2009, and approximately $294 million drawn on the facility as of September 30, 2008. Over 90 percent of PET's current hedging contracts are with Canadian Chartered banks as counterparties.

Distributions

Distributions are determined monthly by the Board of Directors of the Trust's administrator taking into account PET's forecasted production, capital spending and cash flow, forward natural gas price curves, the Trust's current hedging position, targeted debt levels and debt repayment obligations. The following items are considered in arriving at cash distributions to Unitholders:

- Base production forecasts;
- Current financial and physical forward natural gas sales contracts;
- Forward market for natural gas prices;
- Exploration and development expenditures;
- Projected production additions;
- Debt repayments to the extent required or deemed appropriate to manage balance sheet strength for future opportunities;
- Site reclamation and abandonment expenditures; and
- Working capital requirements.

Distributions for the third quarter of 2008 totaled $33.6 million or $0.30 per Trust Unit consisting of $0.10 per Trust Unit paid on August 15, September 15 and October 15.

PET anticipates that distributions and capital expenditures for the remainder of 2008 and 2009 will be funded by funds flow; however changes in natural gas prices, cash netbacks and production levels can affect future capital spending plans and distributions. Acquisitions will continue to be funded through a combination of internally generated funds and external sources of capital.

	Three months ended September 30		Nine months ended September 30	
Distributions ($ thousands)	**2008**	2007	**2008**	2007
Cash flow from operating activities	**72,556**	51,707	**190,585**	184,655
Funds flow	**76,380**	41,212	**213,921**	179,478
Net earnings (loss)	**180,796**	5,246	**39,771**	(24,797)
Distributions	**33,584**	32,448	**100,036**	113,073
Excess of cash flow from operating activities over distributions	**38,972**	19,259	**90,549**	71,582
Excess of funds flow over distributions	**42,796**	8,764	**113,885**	66,405
Excess (shortfall) of net earnings (loss) over distributions	**147,212**	(27,202)	**(60,265)**	(137,870)

The Trust targets long-term sustainability of both its production base and distributions to Unitholders. As such, PET's distribution rates are designed to result in an excess of cash flows from operating activities over distributions which will provide the majority of the funding for PET's exploration and development expenditures for the respective periods. The excess of $39.0 million for the three months ended September 30, 2008 and $19.3 million for the three months ended September 30, 2007 compare to exploration and development expenditures on PET's cash flow statement of $34.1 million and $9.5 million for those periods, respectively. In periods where the excess of cash flows from operating activities over distributions is less than exploration and development expenditures, the shortfall is funded by proceeds from the Trust's DRIP plan, additional bank borrowings and external financing activities as appropriate.

PET's excess of funds flow over distributions for the three and nine months ended September 30, 2008 measured $42.8 million and $113.9 million, respectively compared to $8.8 million and $66.4 million, respectively for the three and nine months ended September 30, 2007. PET's distributions are

less than funds flow as the Trust retains a portion of its funds flow to finance capital expenditures and debt repayments. The Trust's payout ratio, which is the ratio of distributions to funds flow, was 44.0 percent in the current quarter as compared to 78.7 percent for the third quarter of 2007. The payout ratio in future periods will largely be determined by the Trust's capital spending plans and resulting production levels, royalty rates, operating costs and natural gas prices.

The Trust has an excess of distributions over net earnings in all periods presented with the exception of the three months ended September 30, 2008 and distributions are likely to continue to exceed net earnings in future periods. PET does not typically compare distributions to earnings due to the significant impact of non-cash items on earnings, such as unrealized gains and losses on financial instruments and DD&A, which have no impact on the Trust's ability to pay distributions. Where distributions exceed net earnings, a portion of the cash distributions declared may represent an economic return of capital to the Trust's Unitholders.

2008 Outlook and Sensitivities

While natural gas prices at both AECO and NYMEX trading hubs trended lower over the third quarter of 2008, the recent strength of the US dollar relative to the Canadian dollar has leveled off this trend for Canadian gas prices at AECO. At current AECO prices the Trust's monthly distribution is sustainable. As at November 3, 2008, the current actual and forward market for natural gas for October through December 2008 was $6.54 per GJ at AECO. The following table reflects PET's projected realized gas price, monthly funds flow and payout ratio at the current monthly distribution of $0.10 per Trust Unit for the last three months of 2008 at certain AECO natural gas price levels and incorporating the Trust's current financial hedges and physical forward sales contracts.

	Average AECO Monthly Index Gas Price October to December 2008 ($/GJ)		
Funds flow sensitivity analysis	$6.00	$7.00	$8.00
Oil and natural gas production (MMcfe/d)	176	176	176
Realized gas price [(1)] ($/Mcfe)	7.28	7.91	8.54
Funds flow [(2)] ($million/month)	19.7	22.5	25.3
Per Trust Unit ($/Unit/month)	0.175	0.200	0.225
Payout ratio [(2)] (%)	57	50	44
Ending net bank debt ($million)	292	283	275
Ending net total debt ($million)	528	519	511
Ending net total debt to funds flow ratio [(3)] (times)	1.9	1.8	1.8

(1) PET's weighted average forward price on an average of 80,000 GJ/d for the period from October 1 to December 31, 2008 is $7.57 per GJ.

(2) These are non-GAAP measures; see "Significant accounting policies and non-GAAP measures" in this MD&A.

(3) Calculated as ending net total debt (including convertible debentures) divided by estimated 2008 annual funds flow.

The Trust's outlook and sensitivities assume operating costs of $1.75 per Mcfe, cash general and administrative expenses of $0.40 per Mcfe, capital expenditures of $30 million and an interest rate on bank debt of 5.1 percent for the last three months of 2008.

OTHER SIGNIFICANT ACCOUNTING POLICIES AND NON-GAAP MEASURES

Payout ratio

Payout ratio refers to distributions measured as a percentage of funds flow for the period and is used by management to analyze funds flow available for development and acquisition opportunities as well as overall sustainability of distributions. Funds flow does not have any standardized meaning prescribed by GAAP and therefore payout ratio may not be comparable to the calculation of similar measures for other entities.

Operating and funds flow netbacks

Operating and funds flow netbacks are used by management to analyze margin and funds flow on each Mcfe of oil and natural gas production. Operating and funds flow netbacks do not have any standardized meaning as prescribed by GAAP and therefore may not be comparable to the calculation of similar measures for other entities. Operating and funds flow netbacks should not be viewed as an alternative to funds flow from operations, net earnings per Trust Unit or other measures of financial performance calculated in accordance with GAAP.

Total capitalization

Total capitalization is equal to net debt including convertible debentures plus market value of issued equity and is used by management to analyze leverage. Total capitalization as presented does not have any standardized meaning prescribed by GAAP and therefore it may not be comparable with the calculation of similar measures for other entities. Total capitalization is not intended to represent the total funds from equity and debt received by the Trust.

Revenue, including realized gains (losses) on financial instruments

Revenue, including realized gains (losses) on financial instruments is used by management to calculate the Trust's net realized natural gas price taking into account monthly settlements on financial forward natural gas sales and foreign exchange contracts. These contracts are put in place to protect PET's funds flows from potential volatility in natural gas prices, and as such any related realized gains or losses are considered part of the Trust's natural gas price. Revenue, including realized gains (losses) on financial instruments does not have any standardized meaning as prescribed by GAAP and should not be reviewed as an alternative to Revenue or other measures calculated in accordance with GAAP.

Working capital (deficiency)

Working capital and working capital deficiency are calculated by the Trust as current assets less current liabilities, excluding assets and liabilities relating to financial instruments and the current portion of convertible debentures, in order to analyze short-term cash requirements without including mark-to-market balances that may settle for significantly different amounts than those presented on the balance sheet. Working capital (deficiency) as presented does not have any standardized meaning prescribed by GAAP and therefore it may not be comparable with the calculation of working capital (deficiency) for other entities.

INTERNAL CONTROLS

Disclosure controls and procedures have been designed to ensure that information required to be disclosed by the Trust is accumulated and communicated to the Trust's management, as appropriate, to allow timely decisions regarding required disclosure. PET's Chief Executive Officer and Chief Financial Officer have concluded, based on their evaluation as of September 30, 2008 that the Trust's disclosure controls and procedures are effective to provide reasonable assurance that material information related to PET, including its consolidated subsidiaries, is made known to them by others within those entities. During the three months ended September 30, 2008, there have been no changes in PET's internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, the Trust's internal control over financial reporting.

NEW ACCOUNTING STANDARDS

The Canadian Institute of Chartered Accountants ("CICA") has released new accounting standards for implementation effective January 1, 2008, as follows:

a) Section 3031 – Inventories. The new standard replaces the previous inventories standard and prescribes certain methods for valuing inventories. The adoption of this standard has had no material impact on PET's consolidated financial statements.

b) Section 3862 – Financial Instruments - Disclosures and Section 3863 - Financial Instruments - Presentation. The new disclosure standard requires increased disclosure regarding the Trust's financial instruments, the risks associated with these instruments and how the risks are managed. The new presentation standard carries forward the former presentation requirements. The required disclosures are contained in Notes 1a) and 12 to the Trust's interim unaudited consolidated financial statements.

c) Section 1535 - Capital Disclosures. The new standard requires the Trust to disclose its definition of capital and its objectives, policies and processes for managing its capital structure. The required disclosures are contained in Note 12 to the Trust's interim unaudited consolidated financial statements.

INTERNATIONAL FINANCIAL REPORTING STANDARDS ("IFRS")

The Canadian Accounting Standards Board recently confirmed January 1, 2011 as the date IFRS will replace GAAP in Canada for publicly accountable enterprises. PET's first reporting period under IFRS will be interim financial statements for period ended March 31, 2011 and first IFRS annual financial statements for year ended December 31, 2011.

Prior to the implementation date, the Trust intends on completing a detailed financial statement level assessment of the impact of IFRS conversion. During this period PET will decide on accounting policies permissible under IFRS and which fit the Trust's operations and business strategy. PET intends to proceed with integration of the selected accounting policies for the opening balance sheet on January 1, 2010, which will be used for comparative purposes once the IFRS conversion is effective January 1, 2011.

The Trust has identified key internal personnel with expertise to manage its transition to IFRS. During the first nine months of 2008, PET staff have been involved in external IFRS training and development by means of attending conferences, participating in special interest seminars, and focusing on numerous training sessions put on by various accounting service firms.

PET will actively monitor the effects of the IFRS conversion on information technology systems and internal controls over financial reporting.

CRITICAL ACCOUNTING ESTIMATES

The MD&A is based on the Trust's consolidated financial statements which have been prepared in Canadian dollars in accordance with GAAP. The application of GAAP requires management to make estimates, judgments and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities, if any, at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. PET bases its estimates on historical experience and various other assumptions that are believed to be reasonable under the circumstances. Actual results could differ from these estimates under different assumptions or conditions.

The critical accounting estimates employed by PET in the preparation of its consolidated financial statements are discussed in the MD&A for the year ended December 31, 2007. In addition, the following critical accounting estimate was used in the consolidated financial statements for the three months ended September 30, 2008.

Purchase price allocation

Corporate acquisitions are accounted for by the purchase method of accounting whereby the purchase price is allocated to the assets and liabilities acquired based on their fair value, as estimated by management at the time of acquisition. The excess of the purchase price over the fair values represents goodwill. In order to estimate fair values, management has to make various assumptions including commodity prices, reserves acquired and discount rates. Differences from these estimates may impact the future financial statements of the Trust.

QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

PET's operations are affected by a number of underlying risks both internal and external to the Trust. These risks are similar to those affecting others in both the conventional oil and gas royalty trust sector and the conventional oil and gas producers sector. The Trust's financial position, results of operations and cash available for distribution to Unitholders are directly impacted by these factors.

Financial markets and liquidity

The global financial crisis has resulted in a tightening of lending standards among banks and other lenders, and a substantial decrease in the trading price of PET's Trust Units. In the current environment, external financing may be difficult to obtain on terms that are favorable to the Trust.

Income taxes

The Trust Tax Legislation results in a tax applicable at the trust level on certain income from publicly traded mutual fund trusts at rates of tax comparable to the combined federal and provincial corporate tax and treats distributions as dividends to the Unitholders. Existing trusts will have a four-year transition period and, subject to the qualification below, the new tax will apply in January 2011. Once applied the new tax will affect PET's funds flow and may impact cash distributions from the Trust.

The announcement of the Trust Tax Legislation reduced the value of the Trust's Units which has increased the cost to PET of raising capital in the public capital markets for acquisition opportunities requiring external capital funding. PET's access to capital markets could also be affected by this legislation. In addition, the Trust Tax Legislation is expected to place PET and other Canadian energy trusts at a competitive disadvantage relative to industry competitors, including U.S. master limited partnerships, which will continue to not be subject to entity-level taxation. There can be no assurance that PET will be able to reorganize its legal and tax structure to substantially mitigate the expected impact of the Trust Tax Legislation.

Gas over bitumen issue

On July 24, 2007 the Alberta Energy and Utilities Board ("EUB") released Decision 2007-056 related to the application for shut-in of certain natural gas production in northeast Alberta. Although PET does not produce natural gas in the area identified in Decision 2007-056, the EUB did note in its conclusions that a broad bitumen conservation strategy may be required for all areas where natural gas production may interfere with eventual bitumen recovery. It is possible that such a strategy, when drafted and implemented by the EUB, will affect future natural gas production from reservoirs owned by the Trust and located within the gas over bitumen areas of concern. Decision 2007-056 did not specifically provide a timeline or process for arriving at a general bitumen conservation strategy.

Depletion of reserves

The Trust has certain unique attributes which differentiate it from some other oil and gas industry participants. Distributions, absent commodity price increases or cost effective acquisition and development activities, will decline over time in a manner consistent with declining production from typical oil and natural gas reserves. Absent capital injections, PET's initial production levels and reserves will decline.

PET's future oil and natural gas reserves and production and therefore its future funds flows will be highly dependent on PET's success in exploiting its reserve base and acquiring additional reserves. Without reserves additions through acquisition or development activities, the Trust's reserves and production will decline over time as reserves are exploited.

To the extent that external sources of capital including the issuance of additional Trust Units become limited or unavailable PET's ability to make the necessary capital investments to maintain or expand its oil and natural gas reserves could be impaired. To the extent that PET uses funds flow to finance capital expenditures or property acquisitions, the level of distributions could be reduced.

PET reinvests capital to add production to offset the natural production decline of its asset base. The Trust currently estimates that capital expenditures of $100 million to $130 million annually are required to maintain production at current levels. There can be no assurance that PET will be successful in developing or acquiring additional production and reserves on terms that meet the Trust's investment objectives.

Other risks and uncertainties affecting PET's operations are substantially unchanged from those presented in the MD&A for the year ended December 31, 2007.

FORWARD-LOOKING INFORMATION

This MD&A contains forward-looking information with respect to PET.

The use of any of the words "anticipate", "continue", "estimate", "expect", "may", "will", "project", "should", "believe", "outlook" and similar expressions are intended to identify forward-looking statements. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in our forward-looking statements. We believe the expectations reflected in these forward-looking statements are reasonable. However, we cannot assure the reader that these expectations will prove to be correct. The reader should not unduly rely on forward-looking statements included in this report. These statements speak only as of the date of the MD&A.

In particular, this MD&A contains forward-looking statements pertaining to the following:

- the quantity and recoverability of PET's reserves;
- the timing and amount of future production;
- prices for natural gas produced;
- operating and other costs;
- business strategies and plans of management;
- supply and demand for natural gas;
- expectations regarding PET's access to capital to fund its acquisition, exploration and development activities;
- the disposition swap, farm in, farm out or investment in certain exploration properties using third party resources;

- the use of exploration and development activity and acquisitions to replace and add to reserves;
- the impact of changes in natural gas prices on funds flow after hedging;
- drilling, completion, facilities and construction plans;
- the existence, operations and strategy of the commodity price risk management program;
- the approximate and maximum amount of forward sales and hedging to be employed;
- the Trust's acquisition strategy, the criteria to be considered in connection therewith and the benefits to be derived there from;
- the impact of Canadian federal and provincial governmental regulation on the Trust relative to other issuers;
- PET's treatment under governmental regulatory regimes;
- the goal to sustain or grow production and reserves through prudent asset management and acquisitions;
- the emergence of accretive growth opportunities; and
- PET's ability to benefit from the combination of growth opportunities and the ability to grow through the capital markets.

PET's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this MD&A which include but are not limited to:

- volatility in market prices for natural gas;
- risks inherent in PET's operations;
- uncertainties associated with estimating reserves;
- competition for, among other things; capital, acquisitions of reserves, undeveloped lands, skilled personnel, equipment for drilling, completions, facilities and pipeline construction and maintenance;
- incorrect assessments of the value of acquisitions;
- geological, technical, drilling and process problems;
- general economic conditions in Canada, the United States and globally;
- industry conditions including fluctuations in the price of natural gas;
- royalties payable in respect of PET's production;
- governmental regulation of the oil and gas industry, including environmental regulation;
- fluctuation in foreign exchange or interest rates;
- unanticipated operating events that can reduce production or cause production to be shut-in or delayed;
- stock market volatility and market valuations; and
- the need to obtain required approvals from regulatory authorities.

The above list of risk factors is not exhaustive. The forward-looking statements contained in this MD&A are made as at the date of this MD&A and PET does not undertake any obligation to update publicly or to revise any of the forward-looking statements, whether as a result of new information, future events or otherwise, except as may be required by applicable securities laws.

Additional information on PET, including the most recent filed annual report and annual information form, can be accessed from SEDAR at www.sedar.com or from the Trust's website at www.paramountenergy.com.

CONSOLIDATED BALANCE SHEETS

NOTES TO INTERIM CONSOLIDATED FINANCIAL STATEMENTS

(dollar amounts in $ thousands Cdn except as noted)

1. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

These interim consolidated financial statements of Paramount Energy Trust ("PET" or "the Trust") have been prepared by management under the successful efforts method of accounting in accordance with Canadian generally accepted accounting principles ("GAAP") following the same accounting principles and methods of computation as the consolidated financial statements for the year ended December 31, 2007 except as described in note 1 a) and 2 below. Certain of the disclosures provided below are incremental to those included with the annual consolidated financial statements. The specific accounting principles used are described in the annual consolidated financial statements of the Trust appearing on pages 38 through 39 of the Trust's 2007 annual report and should be read in conjunction with these interim financial statements.

The Trust has restated its comparative consolidated statements of earnings (loss) and deficit, and its consolidated statements of cash flows for the nine month period ended September 30, 2007 by $3.1 million in respect of adjustments to stock-based compensation expense.

a) Significant New Accounting Disclosures – Financial Instruments

Effective January 1, 2008, the Trust adopted the accounting requirements for CICA Handbook Sections 3862 ''Financial Instruments – Disclosure'', 3863 ''Financial Instruments – Presentation'', and 1535 ''Capital Disclosures''. Disclosure and presentation requirements for financial instruments are intended to provide further information on the significance of financial instruments to the entity's financial position, performance and funds flows. The Trust has presented and disclosed the nature and extent of the risks arising from financial instruments and how the entity manages such risks. Capital disclosure requirements provide an overview of the Trust's objectives, policies and processes for managing its capital structure. Adjustments to the consolidated financial statements for the three and nine month periods ended September 30, 2008 have been made in accordance with the transitional provisions for these new standards. Refer to disclosure in note 12 relating to each of the above standards.

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument to another entity. Upon initial recognition all financial instruments, including derivatives, are recognized on the balance sheet at fair value. Subsequent measurement is then based on the financial instruments being classified into one of five categories: held for trading, held to maturity, loans and receivables, available for sale and financial liabilities measured at amortized cost. The Trust has designated its financial instruments into the following categories applying the indicated measurement methods:

Financial instrument	Category	Measurement method
Marketable securities	Held for trading	Fair value
Financial instrument assets and liabilities	Held for trading	Fair value
Accounts receivable	Loans and receivables	Amortized cost
Accounts payable and accrued liabilities	Loans and receivables	Amortized cost
Distributions payable	Loans and receivables	Amortized cost
Long term bank debt	Loans and receivables	Amortized cost
Convertible debentures	Financial liabilities	Amortized cost

Convertible debentures are classified as debt on the balance sheet with a portion of the proceeds allocated to equity. The debt component has been measured based on amortized cost. The Trust will assess at each reporting period whether each financial asset, other than those classified as held for trading, is impaired. An impairment loss, if any, is included in net earnings.

The Trust has entered into certain financial derivative and fixed-price physical delivery sales contracts ("physical sales contracts") in order to reduce its exposure to market risks from fluctuations in commodity prices. These instruments are not used for trading or speculative purposes. The Trust has not designated its financial derivative or physical sales contracts as effective accounting hedges, even though the Trust considers all commodity contracts to be effective economic hedges. As a result, all financial derivative contracts and physical sales contracts are classified as held for trading and are recorded on the balance sheet at fair value, with changes in the fair value recognized as "unrealized gains and losses on financial instruments" on the Trust's statement of earnings. Settlements of financial derivative contracts are recognized in realized gains and losses on financial instruments and settlements of physical sales contracts are recognized in oil and natural gas revenue at the time each transaction under a contract is settled.

The Trust measures and recognizes embedded derivatives separately from the host contracts when the economic characteristics and risks of the embedded derivative are not closely related to those of the host contract, when it meets the definition of a derivative and when the entire contract is not measured at fair value. Embedded derivatives are recorded at fair value. The Trust continuously evaluates all new material contracts for existence of embedded derivatives. No material embedded derivatives have been identified throughout the course of these evaluations. Costs incurred to issue convertible debentures are recorded against the related financial liability. The Trust has not incurred any other material costs pertaining to the acquisition of financial assets or liabilities.

2. CHANGE IN ACCOUNTING POLICY

On January 1, 2007, the PET adopted the new Canadian accounting standards for financial instruments. Prior periods have not been restated.

At January 1, 2007, the following adjustments were made to the balance sheet to adopt the new standards:

Changes to balance sheet accounts	At January 1, 2007
Financial instrument asset – current	$ 25,768
Financial instrument asset – long term	4,764
Other assets	(5,419)
Increase in assets	$ 25,113
Convertible debentures	$ 5,224
Deficit	(30,337)
Increase in liabilities and reduction in deficit	$ (25,113)

a) Financial instruments

The Trust uses financial instruments and non-financial derivatives, such as fixed-price commodity sales contracts requiring physical delivery of the underlying commodity, to manage the price risk attributable to anticipated sale of petroleum and natural gas production.

The Trust accounts for its commodity sales contracts requiring physical delivery as non-financial derivatives. Prior to adoption of the new standards, physical receipt and delivery contracts did not fall within the scope of the definition of a financial instrument. Accordingly, the fair values of these financial instruments as at January 1, 2007 were recorded as an asset on the Trust's balance sheet with an offsetting credit to deficit. Changes in fair value of these financial instruments from January 1, 2007 to December 31, 2007 as well as changes in fair values of financial forward natural gas and foreign exchange contracts between January 1, 2007 and December 31, 2007 were recorded in earnings. Financial forward natural gas and foreign exchange contracts have been accounted for as derivatives since January 1, 2006 and as such the changes in the fair value of these contracts have been recorded to earnings since that time.

b) Convertible debenture issue costs

Costs related to the issuance of the Trust's convertible debentures (see note 8) are netted against the carrying value of the convertible debentures and amortized into earnings over the life of the convertible debentures using the effective interest rate method. Prior to January 1, 2007, transaction costs were recorded as deferred charges in other assets and recognized in net earnings on a straight-line basis over the life of the convertible debentures. On adoption, issue costs were adjusted to reflect the application of the effective interest rate method since the date of issue of the related convertible debentures.

3. MARKETABLE SECURITIES

At September 30, 2008 marketable securities were comprised of a $0.3 million investment in Ember Resources Inc. ("Ember"), a publicly traded oil and gas company. The Trust previously had an investment in Cordero Energy Inc. ("Cordero"). On July 4, 2008, Cordero entered into an agreement to sell all of its outstanding common shares to Ember in exchange for a combination of cash and common shares of the acquirer. The transaction between Cordero and Ember closed on September 5, 2008, at which time the Trust recorded proceeds on disposition of marketable securities of $0.8 million related to the cash component of the transaction. The decrease in market value of the remaining common share investment of $0.6 million and nil for the three and nine month periods ended September 30, 2008 have been included in interest and other expense on the statement of earnings.

4. PROPERTY, PLANT AND EQUIPMENT

	September 30, 2008	December 31, 2007
Petroleum and natural gas properties	**$ 2,045,929**	$ 1,971,066
Asset retirement costs	**176,001**	175,679
Corporate assets	**3,904**	2,617
	2,225,834	2,149,362
Accumulated depletion and depreciation	**(1,211,105)**	(1,052,024)
	$ 1,014,729	$ 1,097,338

Property, plant and equipment at September 30, 2008 included $161.8 million (December 31, 2007 - $142.9 million) currently not subject to depletion and $30.4 million (2007 - $30.4 million) of costs related to shut-in gas over bitumen reserves which are not being depleted due to the non-producing status of the wells in the affected properties.

Subsequent to the end of the third quarter the Trust disposed of approximately 0.6 MMcf/d of shut-in gas over bitumen deemed production for proceeds of $5.7 million.

5. ACQUISITIONS

On June 26, 2007 PET closed the acquisition of a private oil and gas company and concurrent sale of certain net assets of the acquiree to a third party (the "Birchwavy Acquisition") for cash consideration of $391.8 million, plus $20.5 million in respect of working capital and acquisition costs of $3.8 million. The Birchwavy Acquisition was funded through the issuance of $250.5 million in subscription receipts which were converted into Trust Units upon closing of the acquisition (see note 9), $75.0 million in 6.5% convertible debentures (see note 8) and existing credit facilities. The acquisition was accounted for using the purchase method of accounting. The following table summarizes the fair value of the assets acquired and liabilities assumed at the date of acquisition.

Cash consideration	$	391,800
Cash paid for net working capital		20,503
Acquisition costs		3,800
Cash consideration paid	$	416,103

Property, plant and equipment	$	450,640
Cash and cash equivalents		23,032
Accounts receivable		20,948
Other assets		2,026
Accounts payable and accrued liabilities		(24,702)
Asset retirement obligation		(55,841)
Cash consideration paid	$	416,103

On April 30, 2007 the Trust closed the acquisition of producing petroleum and natural gas properties and assets in Northeast Alberta (the "Craigend/ Radway/Stry Acquisition") for an aggregate purchase price of $45.2 million. The acquisition was financed through existing credit facilities.

6. NON-CONTROLLING INTEREST

In August of 2006 PET completed an internal restructuring whereby certain assets (the "Severo Assets") were transferred to Severo Energy Corporation ("Severo"), a private company, and a newly formed partnership, the Severo Energy Partnership ("Severo Partnership"). In addition, PET provided a $10.5 million promissory note to Severo in exchange for additional common shares.

In consideration for the assets and the promissory note PET received 15,000,908 common shares of Severo priced at $2.00 per share and a 1 percent partnership interest in the Severo Partnership which has subsequently been transferred back to Severo. Concurrent with the transaction Severo completed a private placement at $2.00 per share to employees and consultants for proceeds of $2.0 million representing approximately 6 percent of the issued common shares of Severo. As of September 30, 2008 PET owned approximately 93 percent of Severo.

PET has nominated two representatives of the two person Board of Directors of Severo. Since the Trust has retained effective control of Severo, the results, assets and liabilities of this entity have been included in these financial statements. The non-PET ownership interests of Severo are shown as non-controlling interest.

7. BANK AND OTHER DEBT

At September 30, 2008 PET had a revolving credit facility with a syndicate of Canadian chartered banks (the "Credit Facility") with a borrowing base of $400 million consisting of a demand loan of $390 million and a working capital facility of $10 million. The revolving feature of the facility expires on May 25, 2009, if not extended. Upon expiry of the revolving feature of the facility, should it not be extended, amounts outstanding as of the expiry date will have a term to maturity date of one additional year. The Trust's lenders have completed their semi-annual borrowing base redetermination, resulting in a reconfirmation of the Trust's borrowing base at $400 million through April 30, 2009. In addition to amounts outstanding under the Credit Facility, PET has outstanding letters of credit in the amount of $4.4 million. Collateral for the Credit Facility is provided by a floating-charge debenture covering all existing and acquired property of the Trust, excluding the Severo assets, as well as unconditional full liability guarantees from all subsidiaries in respect of amounts borrowed under the Credit Facility.

Advances under the Credit Facility are made in the form of Banker's Acceptances ("BA"), prime rate loans or letters of credit. In the case of BA advances, interest is a function of the BA rate plus a stamping fee based on the Trust's current ratio of debt to cash flow. In the case of prime rate loans, interest is charged at the lenders' prime rate. The effective interest rate on outstanding amounts at September 30, 2008 was 4.34 percent.

In addition, Severo has a demand credit facility with a Canadian chartered bank in the amount of $10 million. At September 30, 2008 Severo had not yet drawn on this facility.

8. CONVERTIBLE DEBENTURES

The Trust's 6.5% convertible unsecured subordinated debentures issued on June 20, 2007 ("6.5% Convertible Debentures") mature on June 30, 2012, bear interest at 6.5% per annum paid semi-annually on June 30 and December 31 of each year and are subordinated to substantially all other liabilities of PET including the Credit Facility. The 6.5% Convertible Debentures are convertible at the option of the holder into Trust Units at any time prior to the maturity date at a conversion price of $14.20 per Trust Unit. During the nine month period ended September 30, 2008, $0.1 million of 6.5% Convertible Debentures were converted, resulting in the issuance of 5,281 Trust Units.

The Trust's 6.25% convertible unsecured subordinated debentures issued on April 6, 2006 ("2006 6.25% Convertible Debentures") mature on April 30, 2011, bear interest at 6.25% per annum paid semi-annually on April 30 and October 31 of each year and are subordinated to substantially all other liabilities of PET including the Credit Facility. The 2006 6.25% Convertible Debentures are convertible at the option of the holder into Trust Units at any time prior to the maturity date at a conversion price of $23.80 per Trust Unit.

The Trust's 6.25% convertible unsecured subordinated debentures issued on April 26, 2005 ("2005 6.25% Convertible Debentures") mature on June 30, 2010, bear interest at 6.25% per annum paid semi-annually on June 30 and December 31 of each year and are subordinated to substantially all other liabilities of PET including the Credit Facility. The 2005 6.25% Convertible Debentures are convertible at the option of the holder into Trust Units at any time prior to the maturity date at a conversion price of $19.35 per Trust Unit.

The Trust's 8% convertible unsecured subordinated debentures ("8% Convertible Debentures") mature on September 30, 2009, bear interest at 8.0% per annum paid semi-annually on March 31 and September 30 of each year and are subordinated to substantially all other liabilities of PET including the Credit Facility. The 8% Convertible Debentures are convertible at the option of the holder into Trust Units at any time prior to the maturity date at a conversion price of $14.20 per Trust Unit.

At the option of PET, the repayment of the principal amount of the convertible debentures may be settled in Trust Units. The number of Trust Units to be issued upon redemption by PET will be calculated by dividing the principal by 95 percent of the weighted average trading price for ten trading days prior to the date of redemption. The interest payable may also be settled with the issuance of sufficient Trust Units to satisfy the interest obligation.

	8% Series Amount	2005 6.25% Series Amount	2006 6.25% Series Amount	6.5% Series Amount	Total Amount

9. UNITHOLDERS' CAPITAL

a) Authorized

Authorized capital consists of an unlimited number of Trust Units and an unlimited number of Special Voting Units. No Special Voting Units have been issued to date.

b) Issued and Outstanding

The following is a summary of changes in Unitholders' capital:

Trust Units	Number of Units	Amount
Balance, December 31, 2006	85,186,011	$ 812,174
Units issued pursuant to Unit offering	20,450,000	250,513
Units issued pursuant to Unit Incentive Plan	244,500	1,665
Units issued pursuant to Bonus Rights Plan	981	12
Units issued pursuant to Distribution Reinvestment Plan	3,674,876	32,882
Units issued pursuant to conversion of debentures	1,050	25
Issue costs on convertible debentures converted to Trust Units	-	(1)
Trust Unit issue costs	-	(14,020)
Balance, December 31, 2007	109,557,418	1,083,250
Units issued pursuant to Unit Incentive Plan	25,000	229
Units issued pursuant to Bonus Rights Plan	65,491	914
Units issued pursuant to Distribution Reinvestment Plan	2,742,515	20,623
Units issued pursuant to conversion of debentures	5,281	75
Issue costs on convertible debentures converted to Trust Units	-	(2)
Trust Unit issue costs	-	(9)
Balance, September 30, 2008	**112,395,705**	**$ 1,105,080**

c) Per Unit Information

Basic per unit amounts are calculated using the weighted average number of Trust Units outstanding during the three and nine months ended September 30, 2008 of 111,782,682 and 111,005,063 (2007 – 108,007,596 and 94,431,332 respectively). PET uses the treasury stock method for incentive and bonus rights in instances where market price exceeds exercise price thereby impacting the diluted calculations. In computing diluted per unit amounts for the three and nine months ended September 30, 2008, 1,434,959 and 1,450,642 Trust Units respectively were added to the basic weighted average number of Trust Units outstanding (2007 – 222,676 and 318,755 net Trust Units respectively) for the dilutive effect of incentive rights and convertible debentures. In computing diluted per unit amounts for the three and nine month periods ended September 30, 2008, 3,407,500 incentive rights, as well as 12,746,394 potentially issuable Trust Units through the Convertible Debentures (see note 8) were excluded as the exercise and conversion prices were out of the money at September 30, 2008 (for the three and nine months ended September 30, 2007 – 3,597,000 and 3,407,750 incentive rights, 12,751,675 potentially issuable Trust Units through the Convertible Debentures).

d) Redemption Right

Unitholders may redeem their Trust Units at any time by delivering their Trust Unit certificates to the Trustee of PET. Unitholders have no rights with respect to the Trust Units tendered for redemption other than a right to receive the redemption amount. The redemption amount per Trust Unit will be the lesser of 90 percent of the weighted average trading price of the Trust Units on the principal market on which they are traded for the ten day period after the Trust Units have been validly tendered for redemption and the "closing market price" of the Trust Units.

In the event that the aggregate redemption value of Trust Units tendered for redemption in a calendar month exceeds $100,000 and PET does not exercise its discretion to waive the $100,000 limit on monthly redemptions, PET will not use cash to pay the redemption amount for any of the Trust Units tendered for redemption in that month. Instead, PET will pay the redemption amount for those Trust Units, subject to compliance with applicable laws including securities laws of all jurisdictions and the receipt of all applicable regulatory approvals, by the issuance of promissory notes of PET ("Notes") to the tendering Unitholders.

The Notes delivered as set out above will be unsecured and bear interest at a market rate of interest to be determined at the time of issuance by the Board of Directors based on the advice of an independent financial advisor. The interest will be payable monthly. The Notes will be subordinated and, in certain circumstances, postponed to all of PET's indebtedness. Subject to prepayment, the Notes will be due and payable five years after issuance.

10. INCENTIVE PLANS

a) Unit Incentive Plan

PET has adopted a Unit Incentive Plan ("Unit Incentive Plan") which permits the Administrator's Board of Directors to grant non-transferable rights to purchase Trust Units ("Incentive Rights") to its and affiliated entities' employees, officers, directors and other direct and indirect service providers. The purpose of the Unit Incentive Plan is to provide an effective long-term incentive to eligible participants and to reward them on the basis of PET's long-term performance and distributions. The Administrator's Board of Directors will administer the Unit Incentive Plan and determine participants, numbers of Incentive Rights and terms of vesting. The grant price of the Incentive Rights ("Grant Price") shall equal the per Trust Unit closing price on the trading date immediately preceding the date of the grant, unless otherwise permitted.

Prior to June 30, 2007, the exercise price of the Incentive Rights ("Exercise Price") was, subject to certain limitations, reduced by deducting from the Grant Price the aggregate amounts of all distributions on a per Trust Unit basis that PET pays its Unitholders after the date of grant which represented a return of more than 2.5 percent per quarter on PET's consolidated net property, plant and equipment on its balance sheet at each calendar quarter end ("Base Return"). The Exercise Price will be adjusted on a quarterly basis and in no case may it be reduced to less than $0.001 per Trust Unit. Effective June 30, 2007, the Base Return was reduced to nil in the formula for calculating Exercise Price reductions. The Incentive Rights are only dilutive to the calculation of earnings per Trust Unit if the exercise price is below the market price of the Trust Units. During the three and nine month periods ended September 30, 2008 the Trust recorded $1.2 million and $4.2 million respectively in Trust Unit compensation ($0.6 million and $3.0 million respectively for the three and nine month periods ended September 30, 2007).

At September 30, 2008 PET had 7.2 million Unit Incentive and Bonus Rights issued and outstanding relative to the 11.2 million (10 percent) of total Trust Units outstanding reserved under the Unit Incentive and the Bonus Rights Plans (see note 10 (b)). As at September 30, 2008, 1,015,875 Incentive Rights granted under the Unit Incentive Plan had vested but were unexercised (285,750 as of September 30, 2007).

PET used the binomial lattice option pricing model to calculate the estimated fair value of the outstanding Incentive Rights issued on or after January 1, 2003. The following assumptions were used to arrive at the estimate of fair value as at the date of grant:

		Year of grant
	2008	2007
Distribution yield (%)	**0.0**	0.0 – 6.3
Expected volatility (%)	**30.0 – 32.5**	28.5 – 29.5
Risk-free interest rate (%)	**2.66 – 3.46**	3.86 – 4.65
Expected life of Incentive Rights (years)	**3.75**	3.75 – 4.5
Vesting period of Incentive Rights (years)	**4.0**	4.0
Contractual life of Incentive Rights (years)	**5.0**	5.0
Weighted average fair value per Incentive Right on the grant date	**$ 2.36**	$ 1.82

Incentive Rights	**Average exercise price**	**Incentive Rights**
Balance, December 31, 2006	$ 14.60	3,644,675
Granted	6.97	3,661,875
Exercised	0.31	(244,500)
Forfeited	13.23	(371,175)
Balance, December 31, 2007	11.02	6,690,875
Granted	8.42	515,000
Exercised	5.29	(25,000)
Forfeited	6.99	(127,875)
Balance, September 30, 2008	**$ 10.92**	**7,053,000**

The following summarizes information about Incentive Rights outstanding at September 30, 2008:

Range of exercise prices	**Number outstanding at September 30, 2008**	**Weighted average contractual life (years)**	**Weighted Average exercise price/Incentive Right**	**Number exercisable at September 30, 2008**	**Weighted average exercise price/Incentive Right**
$ 3.99	50,000	0.1	$ 3.99	50,000	$ 3.99
$ 4.68 - $ 10.37	4,283,375	3.6	6.22	373,375	6.70
$ 10.71 - $ 14.78	1,960,500	2.0	12.10	369,000	12.03
$ 14.85 - $ 18.28	759,125	2.5	16.15	223,500	16.90
Total	7,053,000	2.8	$ 10.92	1,015,875	$ 10.75

b) Bonus Rights Plan

PET has implemented a bonus rights plan ("Bonus Rights Plan") for certain officers, employees and direct and indirect service providers of the Administrator ("Service Providers"). Rights to purchase Trust Units ("Bonus Rights") granted under the Bonus Rights Plan may be exercised during a period (the "Exercise Period") not exceeding three years from the date upon which the Bonus Rights were granted. The Bonus Rights vest over two years. At the expiration of the Exercise Period, any Bonus Rights which have not been exercised shall expire and become null and void. Upon vesting, the plan participant is entitled to receive the vested units plus an additional number of Trust Units equal to the value of monthly distributions on PET's Trust Units divided by the Treasury Purchase Price under PET's Distribution Reinvestment and Optional Trust Unit Purchase Plan ("DRIP Plan").

For the three and nine month periods ended September 30, 2008, $0.1 million and $0.9 million in compensation expense was recorded in respect of the Bonus Rights granted (three and nine month periods ended September 30, 2007 – nil and $0.5 million).

The following table shows changes in the Bonus Rights outstanding under the Bonus Rights Plan:

	Bonus Rights
Balance, December 31, 2006	37,805
Granted	45,668
Exercised	(981)
Forfeited	(1,193)
Additional grants for accrued distributions	12,120
Balance, December 31, 2007	93,419
Granted	110,315
Exercised	(65,491)
Forfeited	(1,174)
Additional grants for accrued distributions	15,095
Balance, September 30, 2008	**152,164**

A reconciliation of contributed surplus is provided below:

Balance, as at December 31, 2006	$ 5,760
Trust Unit-based compensation expense	4,287
Transfer to Unitholders' capital on exercise of Incentive Rights	(1,590)
Transfer to Unitholders' capital on exercise of Bonus Rights	(11)
Balance, as at December 31, 2007	8,446
Trust Unit-based compensation expense	4,195
Transfer to Unitholders' capital on exercise of Incentive Rights	(97)
Transfer to Unitholders' capital on exercise of Bonus Rights	(914)
Balance, as at September 30, 2008	**$ 11,630**

11. ASSET RETIREMENT OBLIGATIONS

The total future asset retirement obligation was estimated based on PET's net ownership interest in all wells and facilities, estimated costs to reclaim and abandon these wells and facilities and the estimated timing of the costs to be incurred in future periods. PET has estimated the net present value of its total asset retirement obligations to be $199.1 million as at September 30, 2008 based on an undiscounted total future liability of $365.8 million. These payments are expected to be made over the next 25 years with the majority of costs incurred between 2015 and 2020. PET used a credit adjusted risk free rate of 7.0 percent to calculate the present value of the asset retirement obligation.

The following table reconciles the Trust's asset retirement obligations:

	September 30, 2008	December 31, 2007
Obligation, beginning of year	**$ 194,132**	$ 109,437
Obligations incurred	**2,396**	11,212
Obligations acquired	**-**	65,408
Obligations disposed	**(4,131)**	-
Expenditures for obligations during the period	**(3,590)**	(2,597)
Accretion expense	**10,332**	10,672
	$ 199,139	$ 194,132

12. FINANCIAL RISK MANAGEMENT

The Trust has exposure to the following risks from its use of financial instruments:

- Credit risk
- Liquidity risk
- Market risk

This note presents information about the Trust's exposure to each of the above risks, the Trust's objectives, policies and processes for measuring and managing risk, and the Trust's management of capital. Further quantitative disclosures are included throughout these financial statements.

The Board of Directors has overall responsibility for the establishment and oversight of the Trust's risk management framework. The Board has implemented and monitors compliance with risk management policies.

The Trust's risk management policies are established to identify and analyze the risks faced by PET, to set appropriate risk limits and controls, and to monitor risks and adherence to market conditions and the Trust's activities.

a) Credit Risk

Credit risk is the risk of financial loss to the Trust if a customer or counterparty to a financial instrument fails to meet its contractual obligations, and arises principally from the Trust's receivables from joint venture partners and petroleum and natural gas marketers.

Receivables from realized gains on financial gas sales arrangements are collected between the 2nd and 8th day of the month of the arrangement. 90 percent of the counterparties to these financial gas sales arrangements are large Canadian chartered banks who have remained financially stable through the recent credit crisis. Receivables from petroleum and natural gas marketers are normally collected on the 25th day of the month following production. The Trust's policy to mitigate credit risk associated with these balances is to create marketing relationships with large, well established purchasers with high credit ratings. The Trust historically has not experienced any collection issues with its petroleum and natural gas marketing receivables. Joint venture receivables are typically collected within one to three months of the joint venture bill being issued to the partner. The Trust attempts to mitigate the risk from joint venture receivables by obtaining partner approval of significant capital expenditures prior to expenditure. However, the receivables are generally from participants in the oil and natural gas sector, and collection of the outstanding balances is dependent on the ability of the joint venture partner to pay, which is influenced by industry factors such as commodity price fluctuations, escalating costs, and the risk of unsuccessful drilling and oil and gas production In addition, further risk exists with joint venture partners as disagreements occasionally arise that increase the potential for non-collection. The Trust does not typically obtain collateral from oil and natural gas marketers or joint venture partners; however, the Trust does have the ability in some cases to withhold production or amounts payable to joint venture partners in the event of non-payment.

The Trust manages the credit exposure related to marketable securities by monitoring the performance and financial strength of the investments and the liquidity of the securities being held.

During the period credit risk did not have any impact on the change in fair value of financial liabilities classified as held for trading.

The carrying amount of accounts receivable and marketable securities represents the maximum credit exposure. The Trust's allowance for doubtful accounts as at September 30, 2008 is $4.4 million. $4.2 million of the allowance pertains to the working capital component of the Birchwavy Assets acquired in 2007 and was included as part of the purchase price equation (see note 5). The amount of the allowance was determined by assessing the probability of collection for each past due receivable related to the acquisition. The Trust is currently involved in negotiations with the joint venture partners involved in an effort to recover the full amount of the receivables in question. The total amount of receivables past due 90 days amounted to $11.2 million, as at September 30, 2008 and pertains primarily to the Birchwavy assets. As at the balance sheet date, as a mitigating factor to the credit exposure, the Trust has $3.0 million payable to counterparties from which the Trust holds past due receivables.

b) Liquidity Risk

Liquidity risk is the risk that the Trust will not be able to meet its financial obligations as they are due. The Trust's approach to managing liquidity is to ensure, as far as possible, that it will have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions without incurring unacceptable losses or risking harm to the Trust's reputation.

The Trust prepares annual capital expenditure budgets which are regularly monitored and updated as considered necessary. Further, the Trust utilizes authorizations for expenditures on both operated and non-operated projects to further manage capital expenditures. To facilitate the capital expenditure program, the Trust has a revolving credit facility with a syndicate of Canadian chartered banks as outlined in note 7. The lender reviews the Trust's borrowing base on a semi-annual basis. The following are the contractual maturities of financial liabilities and associated interest payments as at September 30, 2008:

Contractual repayments of financial liabilities (1)	Total	2008	2009-2012	Thereafter
Accounts payable and accrued liabilities	$ 68,518	$ 68,518	$ -	$ -
Long term bank debt – principal	$ 294,074	$ -	$ 294,074	$ -
Convertible debentures – principal (2)	$ 236,034	$ -	$ 236,034	$ -
Total	$ 598,626	$ 65,518	$ 530,108	$ -

(1) Financial instrument liabilities are based on a mark-to-market calculation as of the balance sheet date and as such, future contractual repayments are uncertain. As a result, PET has not included financial instruments as financial liabilities in the above repayments schedule.

(2) Assuming repayment of principal is not settled in Trust Units, at the option of PET.

Interest payments on financial liabilities	Total	2008	2009-2012	Thereafter
Interest payment on bank debt [1]	$ 21,059	$ 3,191	$ 17,868	$ -
Interest on convertible debentures [2]	$ 40,920	$ 3,761	$ 37,159	$ -
Total	$ 61,979	$ 6,952	$ 55,027	$ -

(1) Assuming revolving feature of the credit facility is not extended and calculated at the September 30, 2008 effective interest rate of 4.34%, assuming a constant debt level equivalent to the balance at September 30, 2008.

(2) Assuming payment of interest is not settled in Trust Units, at the option of PET.

c) Market Risk

Market risk is the risk that changes in market prices such as foreign exchange rates, commodity prices, and interest rates will affect the Trust's net earnings or the value of financial instruments. The objective of market risk management is to manage and control market risk exposures within acceptable limits while maximizing returns.

The Trust utilizes both financial derivatives and physical delivery sales contracts to manage market risks related to commodity prices. All such transactions are conducted in accordance with the Trust's Risk Management Policy, which has been approved by the Board of Directors.

Foreign currency exchange rate risk

Foreign currency exchange rate risk is the risk that the fair value or future cash flows will fluctuate as a result of changes in foreign exchange rates. The majority of the Trust's oil and natural gas sales are denominated in Canadian dollars. Due to the fact that the demand for oil and natural gas is substantially driven by the demand in the United States, the Trust's exposure to US dollar foreign exchange risk is indirectly driven by the price of oil and natural gas. From time to time the Trust also may use foreign exchange contracts to mitigate the effects of fluctuations in exchange rates on the Trust's cash flows. The Trust also enters into financial and physical natural gas sales contracts priced at AECO in Canadian dollars which effectively fixes the foreign currency exchange rate; refer to commodity price risk analysis below. As at September 30, 2008 the Trust had no outstanding forward foreign exchange rate contracts.

Commodity price risk

Commodity price risk is the risk that the fair value or future cash flows will fluctuate as a result of changes in commodity prices. Commodity prices for petroleum and natural gas are impacted by the world economic events that dictate the levels of supply and demand. The Trust has attempted to mitigate commodity price risk through the use of various financial derivative and physical delivery sales contracts. The Trust's policy is to enter into financial and forward physical gas sales contracts up to a maximum of 50 percent of forecasted production volumes including gas over bitumen deemed production, as outlined in the Trust's risk management policy.

As at September 30, 2008, the Trust has physical natural gas sales contracts which are contingent on future market prices. These contracts are not classified as financial instruments due to the fact that the settlement price corresponds directly with fluctuations in natural gas prices.

The remainder of production not subject to derivative contracts or fixed volume, non-derivative physical sales contracts is settled monthly with counterparties based on future monthly actual production and future monthly settlement prices.

For the period ended September 30, 2008 forward physical gas fixed-price sales contracts resulted in realized loss of $0.9 million that have been included in oil and natural gas revenue. In order to calculate these realized gains, PET compares the fixed price received to the AECO monthly index price and the NYMEX index.

Realized losses on financial instruments, including financial natural gas commodity contracts and foreign exchange price contracts, recognized in net earnings (loss) for three and nine month periods ended September 30, 2008 were $0.9 million and $9.9 million respectively (realized gains of $2.1 million and $36.0 million for the three and nine month periods ended September 30, 2007).

Natural gas commodity contracts

At September 30, 2008 the Trust had entered into financial and forward physical gas sales arrangements at AECO as follows:

Type of contract	PET sold/bought	Volumes at AECO (GJ/d)	Price ($/GJ)			Term
			Fixed	Floor	Ceiling	
Financial	sold	99,500	$ 7.407	-	-	October 2008
Financial	buy	(17,500)	$ 7.043	-	-	October 2008
Physical	sold	51,800	$ 6.359	-	-	October 2008
Physical	buy	(20,000)	$ 5.973	-	-	October 2008
Physical	sold	2,500	$ 7.450	-	-	October 2008 – December 2008
Physical	buy	(2,500)	$ 6.625	-	-	October 2008 – December 2008
Physical	sold	2,500	$ 6.100	-	-	November 2008
Physical	buy	(2,500)	$ 5.845	-	-	November 2008
Financial	sold	68,500	$ 7.787	-	-	November 2008 – March 2009
Financial	buy	(5,000)	$ 7.938	-	-	November 2008 – March 2009
Physical	sold	10,000	$ 8.223	-	-	November 2008 – March 2009
Physical	buy	(7,500)	$ 7.703	-	-	November 2008 – March 2009
Financial	sold	5,000	-	$ 7.000	$ 8.000	November 2008 – March 2009
Financial	sold	72,500	$ 8.407	-	-	April 2009 – October 2009
Financial	buy	(15,000)	$ 7.178	-	-	April 2009 – October 2009
Physical	sold	5,000	$ 8.645	-	-	April 2009 – October 2009
Physical	buy	(5,000)	$ 8.445	-	-	April 2009 – October 2009
Financial	sold	47,500	$ 9.114	-	-	November 2009 – March 2010
Financial	sold	25,000	$ 7.558	-	-	April 2010 – October 2010

At September 30, 2008 the Trust had entered into financial and forward physical gas sales arrangements at NYMEX as follows:

Type of contract	PET sold/bought	Volumes at NYMEX (MMBTU/d)	Price (US$/MMBTU)	Term
Financial	sold	50,000	$ 7.413	October 2008
Financial	buy	(50,000)	$ 7.431	October 2008
Financial	sold	15,000	$ 7.953	November 2008
Financial	buy	(15,000)	$ 7.769	November 2008
Financial	sold	2,500	$ 9.420	November 2008 – March 2009
Financial	buy	(2,500)	$ 9.260	November 2008 – March 2009

At September 30, 2008 the Trust had entered into financial and forward physical gas sales arrangements to fix the basis differential between the NYMEX and AECO trading hubs as follows. The price at which these contracts settle is equal to the NYMEX index less a fixed basis amount. Physical basis contracts represent commitments rather than contractual obligations.

Type of contract	PET sold/bought	Volumes at NYMEX (MMBTU/d)	Price (US$/MMBTU)	Term
Financial – basis	sold	5,000	$ (0.975)	October 2008
Financial – basis	buy	(5,000)	$ (1.045)	October 2008
Physical – basis	sold	37,500	$ (0.969)	October 2008
Physical – basis	buy	(37,500)	$ (1.200)	October 2008
Physical – basis	sold	5,000	$ (1.340)	November 2008 – March 2009
Physical – basis	buy	(5,000)	$ (1.435)	November 2008 – March 2009
Financial – basis	sold	2,500	$ (0.880)	April 2009 – October 2009
Financial – basis	buy	(2,500)	$ (0.930)	April 2009 – October 2009
Physical – basis	sold	17,500	$ (0.445)	April 2010 – October 2010
Physical – basis	buy	(17,500)	$ (0.731)	April 2010 – October 2010
Financial – basis	sold	15,000	$ (0.547)	April 2011 – October 2011
Financial – basis	buy	(15,000)	$ (0.550)	April 2011 – October 2011

For the three and nine months ended September 30, 2008 unrealized gains of $168.9 million and $19.2 million were recorded in the consolidated statement of earnings (loss) related to the change in fair value of financial and physical forward sales contracts from December 31, 2007 to September 30, 2008. An unrealized gain of $33.6 million and an unrealized loss of $18.0 million, respectively were recorded for the three and nine months ended September 30, 2007.

Commodity price sensitivity analysis

As at September 30, 2008, if future natural gas prices changed by $0.25 per GJ for AECO contracts and $0.25 per MMBTU for NYMEX contracts, with all other variables held constant, after tax net earnings for the period would have changed by $8.3 million. A potential increase in the natural gas price would result in a decrease to net earnings, while a decrease would lead to increased net earnings.

Mark to market sensitivity was based on published forward AECO and NYMEX prices. Gains and losses on NYMEX contracts were calculated based on the USD foreign exchange rate as at September 30, 2008.

Interest rate risk

The Trust utilizes a long-term debt credit facility which bears a floating rate of interest. Both of these financial liabilities are subject to interest rate risk. Increased future interest rates will decrease future cash flows and earnings, thereby potentially affecting the Trust's future distributions and capital investments.

PET's convertible debentures were issued at a fixed interest rate and as such the debentures are not materially impacted by market interest rate fluctuations. To ensure accounts payable, including monthly distributions, are settled on a timely basis, the Trust manages liquidity risk as previously outlined in this note, thus limiting exposure to interest rate fluctuations and other penalties potentially resulting from past due payables.

The Trust had no interest rate swap or financial contracts in place as at or during the three months ended September 30, 2008.

Interest rate sensitivity analysis

For period ended September 30, 2008, if interest rates had been 1 percent lower or higher the impact on earnings would be as follows:

Interest rate sensitivity ($ thousands)	1% increase	1% decrease
(Decrease)/Increase in net earnings	$ (800)	$ 800

The net earnings impact as a result of interest rate fluctuations is based on the assumption that the lender increases or decreases the fixed term BA rate consistently, based on a market interest rate change of 1 percent.

Capital management

The Trust's policy is to maintain a strong capital base so as to retain investor, creditor and market confidence and to sustain the future development of the business. The Trust manages its capital structure and makes adjustments in light of changes in economic conditions and the risk characteristics of the underlying oil and natural gas assets. The Trust considers its capital structure to include unitholders' capital, bank debt, convertible debentures and working capital. In order to maintain or adjust the capital structure, the Trust may from time to time issue units or debt securities and adjust its capital spending and distributions to manage current and projected debt levels. This overall objective and policy for managing capital remains unchanged in 2008 from prior reporting periods.

The Trust monitors capital based on the ratio of net debt to annualized funds flow, calculated as follows for the three months ended September 30, 2008:

Net debt ($ thousands)	September 30, 2008
Bank debt	$ 294,074
Convertible debentures, measured at principal amount	$ 236,034
Working capital deficiency (surplus) (2)	$ (7,366)
Net debt	$ 522,742
Cash flow provided by operating activities	$ 72,556
Exploration costs (3)	$ 918
Expenditures on asset retirement obligations	$ 684
Changes in non-cash operating working capital	$ 2,222
Funds flow	$ 76,380
Annualized funds flow (1)	$ 305,520
Net debt to annualized funds flow ratio (times) (1)	1.71

(1) These are non-GAAP measures; see "Significant accounting policies and non-GAAP measures" in management's discussion and analysis.

(2) Working capital deficiency (surplus) excludes short-term financial instrument assets and liabilities related to the Trust's hedging activities.

(3) Certain exploration costs are added back to funds flow in order to be more comparable to other energy trusts that use the full cost method of accounting for oil and gas activities. Exploration costs that are added back to funds flow include seismic expenditures, dry hole costs and expired leases and are considered by PET to be more closely related to investing activities than operating activities.

As at September 30, 2008, the Trust's ratio of net debt to annualized funds flow was 1.71 to 1. This ratio is monitored continuously by the Trust, and the targeted range of net debt to funds flow varies based on such factors as: acquisitions, commodity prices, forecasts of future commodity prices, price management contracts, projected cash flows, distributions, capital expenditure programs and timing of such programs. As a part of the management of this ratio, the Trust prepares annual capital expenditure budgets, which are updated as necessary depending on varying factors including current and forecast prices, successful capital deployment and general industry conditions. Capital spending budgets are approved by the Board of Directors.

The Trust's unitholders' capital, convertible debentures and working capital are not subject to external restrictions. The Trust's credit facility is subject to lender's covenants with which PET was in compliance with at September 30, 2008.

The capital structure at September 30, 2008 was as follows:

Net debt	$ 522,742
Total equity (net of deficit) (1)	295,681
Non-controlling interest	1,893
Total capital at September 30, 2008	**$ 820,316**

(1) As at September 30, 2008 the closing market price of Paramount Energy Trust's Units was $7.45.

Fair value of financial instruments

The Trust's financial instruments as at September 30, 2008 and December 31, 2007 include marketable securities, accounts receivable, derivative contracts, accounts payable and accrued liabilities, distributions payable, bank debt and convertible debentures.

The fair values of marketable securities and convertible debentures are based on exchanged traded values in active markets as at the balance sheet date.

The fair value of accounts receivable, accounts payable, accrued liabilities and distributions payable approximate their carrying amounts due to their short-terms to maturity.

The fair value of derivative contracts is based on the difference between the fixed contract price or fixed basis differential and readily observable estimated, external forward market price curves as at the balance sheet date, based on natural gas volumes in executed contracts.

Bank debt bears interest at a floating market rate and accordingly the fair market value approximates the carrying value.

13. OPERATING LEASES

a) Operating leases

As of September 30, 2008, the future minimum payments under office lease costs and related sublease recoveries under contractual agreements consisted of:

Operating Leases	
2008	$ 740
2009	2,956
2010	2,912
2011	728
Total commitment	$ 7,336

b) Pipeline commitments

The Trust has long-term commitments to pay for gas transportation on certain major pipeline systems in western Canada. As of September 30, 2008, the future minimum payments under pipeline commitments under contractual agreements consisted of:

Pipeline Commitments	
2008	$ 2,496
2009	6,790
2010	3,082
2011	1,975
2012	1,108
After 2012	2,178
Total commitment	$ 17,629

14. FUTURE INCOME TAXES

On June 12, 2007, Bill C-52 Budget Implementation Act, 2007 was enacted by the Canadian federal government, which contains legislation to change the tax treatment of publicly traded trusts in Canada. As a result, a new 31.5 percent tax will be applied to distributions from Canadian public income trusts effective January 1, 2011. On October 30, 2007, the Finance Minister announced a reduction of the federal corporate income tax rate from 22.1 percent to 15 percent by 2012. The reductions will be phased in between 2008 and 2012. PET has not recorded a future income tax liability as a result of the Trust Tax Legislation being enacted. Based on production forecasts for PET's proved reserves included in the independent reserve report as at December 31, 2007, the tax values of the Trust's assets are projected to exceed the related book values by January 1, 2011, the date the direct tax on distributions within the Trust becomes effective.

15. GAS OVER BITUMEN ROYALTY ADJUSTMENTS

On October 4, 2004 the Government of Alberta enacted amendments to the royalty regulation with respect to natural gas which provide a mechanism whereby the Government may prescribe a reduction in the royalty calculated through the Crown royalty system for operators of gas wells which have been denied the right to produce by the Alberta Energy and Utilities Board (the "AEUB") as a result of recent bitumen conservation decisions. Such royalty reduction was initially prescribed in December 2004, retroactive to the date of shut-in of the gas production.

If production recommences from zones previously ordered to be shut-in, gas producers may pay an incremental royalty to the Crown on production from the reinstated pools, along with Alberta Gas Crown Royalties otherwise payable. The incremental royalty will apply only to the pool or pools reinstated to production and will be established at one percent after the first year of shut-in increasing at one percent per annum based on the period of time such zones remained shut-in to a maximum of ten percent. The incremental royalties payable to the Crown would be limited to amounts recovered by a gas well operator through the reduced royalty.

At September 30, 2008 PET had received $94.0 million ($77.6 million at December 31, 2007) for cumulative gas over bitumen royalty adjustments to that date. Of this amount, $20.9 million has been recorded as revenue to date and $73.1 million has been recorded on the Trust's balance sheet.

In 2006 PET disposed of certain shut-in gas wells in the gas over bitumen area. As part of the disposition agreement, the Trust continues to receive the gas over bitumen royalty adjustments related to the sold wells, although the ownership of the natural gas reserves is transferred to the buyer. As such, any overriding royalty payable to the Crown when gas production recommences from the affected wells is no longer PET's responsibility. As a result of this disposition, the gas over bitumen royalty adjustments received by the Trust for the affected wells are now considered revenue since they will not be repaid to the Crown.

This report contains forward-looking information with respect to Paramount Energy Trust (PET). This forward looking information is based on certain assumptions that involve a number of risks and uncertainties and are not guarantees of future performance. Actual results could differ materially as a result of changes in PET's plans, changes in commodity prices, general economic, market and business conditions as well as production, development and operating performance, regulations and other risks associated with oil and gas operations.
